

19 DEGREES OF ADJECTIVES

Adjectives describe the quality of a noun, like size, colour, or how something looks or feels. Degrees of adjectives show comparisons, telling us if something is bigger, smaller, better, or worse than something else.

There are three degrees of adjectives:

Positive Degree

This is the basic form of the adjective, used when there is no comparison.

For example:

Ali is tall.

Comparative Degree

This is used when comparing two things. Usually, we add -er to the adjective or use more before the adjective.

For example:

Ali is taller than Ahmed.

Superlative Degree

This is used when comparing more than two things and showing the highest or lowest degree. We usually add -est to the adjective or use most before the adjective.

For example:

Ali is the tallest boy in the class.

Positive	Comparative	Superlative
tall	taller	tallest
small	smaller	smallest
big	bigger	biggest
smart	smarter	smartest
beautiful	more beautiful	most beautiful

19.1 Choose the correct degree of the adjectives below.
