

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

Learning Objectives

- Learn how to format text using superscript and subscript in MS Word.
- Understand how to adjust line spacing and indent text for better document organization.
- Explore how to use formatting options to enhance document presentation.

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

INTRODUCTION TO MS WORD

MS Word is used to write and format text in documents. Besides basic formatting like bold and italics, MS Word allows you to use superscript and subscript to format text for mathematical equations or chemical formulas. You can also change the line spacing and indentation to make the text easier to read.

KEY FORMATTING FEATURES:

1. Superscript:

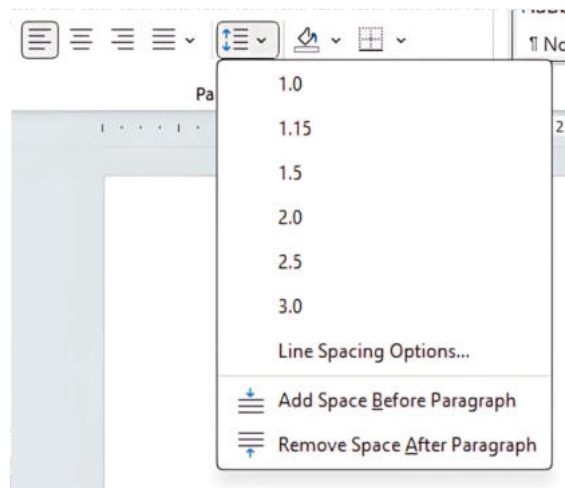

Superscript makes text smaller and raises it above the line of text. It's often used in mathematical equations.

2. Subscript:

Subscript makes text smaller and lowers it below the line of text. It's used in chemical formulas.

3. Line Spacing:

Line spacing refers to the space between lines in a paragraph. You can increase or decrease this space to make your text more readable.

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

4. Indentation:

Indentation refers to the space at the beginning of a paragraph. You can adjust this space to make your document look more organized.

SUPERSCRIFT

Superscript makes text smaller and raises it above the line of text, often used in mathematical equations.

Steps to Apply Superscript in MS Word:

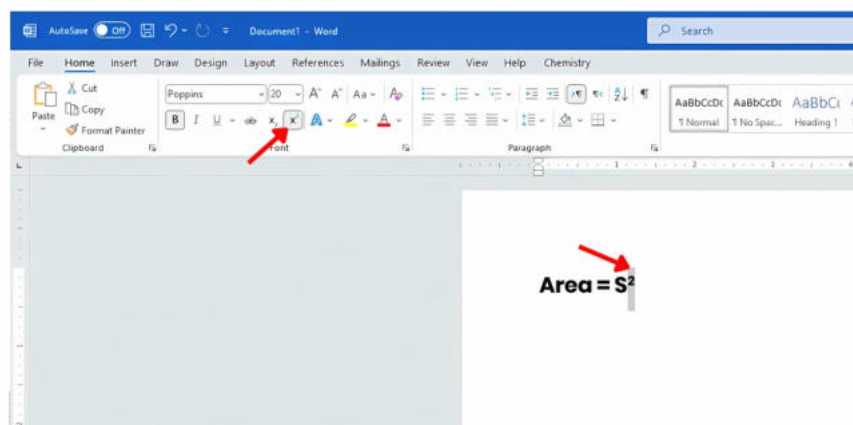

1. Highlight the text or number that you want to format as superscript.
2. Go to the Home tab in the toolbar at the top.
3. In the Font group, locate the **Superscript (X²)** button.
4. Click the Superscript button, and the selected text will be raised above the line.

- Alternatively, press **Ctrl + Shift + =** (equal sign) on your keyboard.

5. To remove superscript formatting, click the Superscript button again or use the same keyboard shortcut.

Example Sentence:

The formula for calculating the area of a square is $A=S^2$, where S^2 represents the square of the side length.

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

SUBSCRIPT

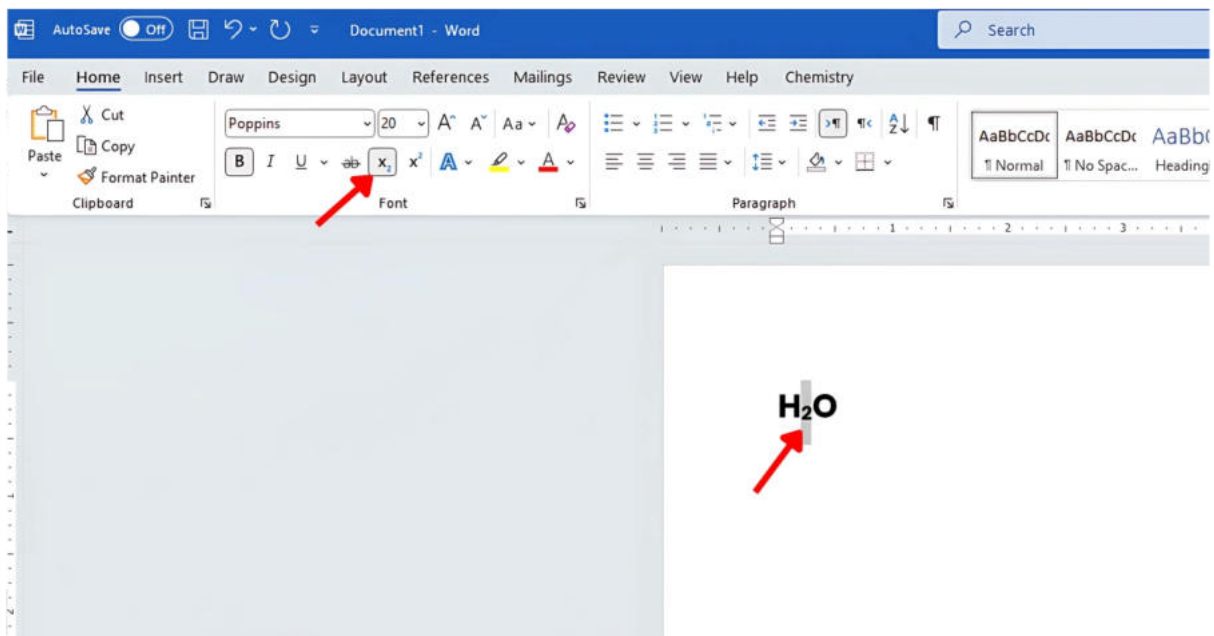

Subscript makes text smaller and lowers it below the line of text, often used in chemical formulas or footnotes.

Steps to Apply Subscript in MS Word:

1. Highlight the text or number that you want to format as subscript.
2. Go to the Home tab in the toolbar.
3. In the Font group, locate the **Subscript (X₂)** button.
4. Click the Subscript button, and the selected text will appear below the line.
 - Alternatively, press **Ctrl + =** (equal sign) on your keyboard.
5. To remove subscript formatting, click the Subscript button again or use the same keyboard shortcut.

Example Sentence:

Water is made up of two hydrogen atoms and one oxygen atom, written as H₂O, where the subscript '2' represents the number of hydrogen atoms in the molecule.

LINE SPACING

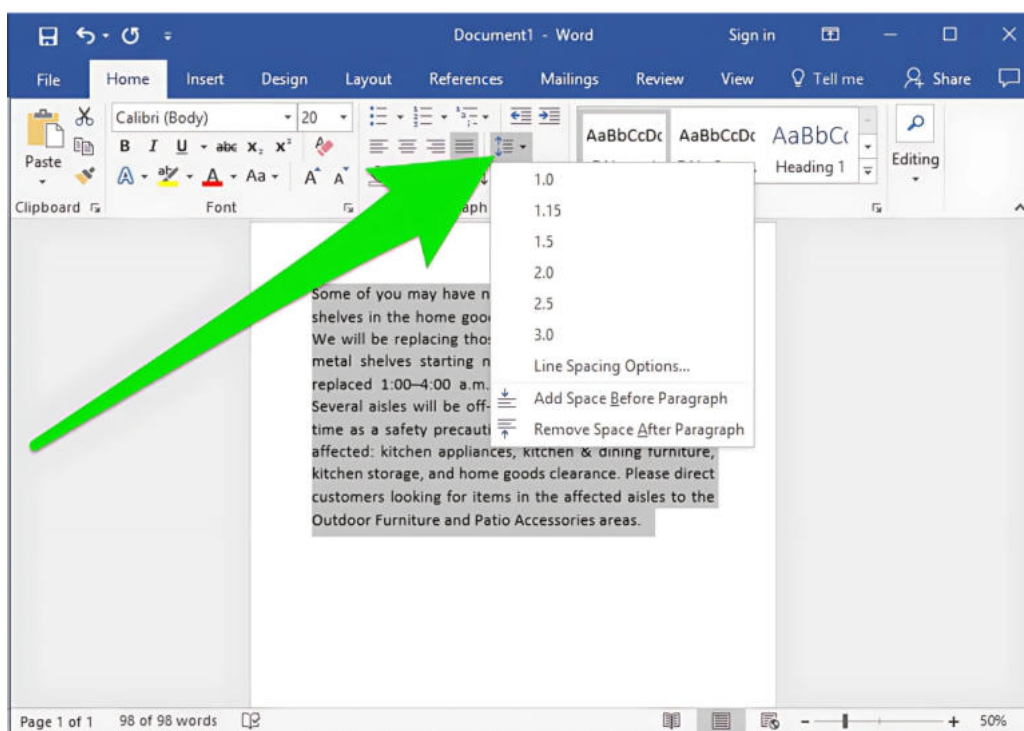

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

Line spacing refers to the space between lines in a paragraph, which can be increased or decreased to make the text more readable.

Steps to Adjust Line Spacing in MS Word:

1. Select the paragraph(s) where you want to adjust the line spacing.
2. Go to the Home tab in the toolbar.
3. In the Paragraph group, click the **Line and Paragraph Spacing** icon (a button with lines and arrows).
4. A drop-down menu will appear with options such as **1.0** (single spacing), **1.5** and **2.0** (double spacing).
5. Select the desired line spacing option.
 - For custom spacing, select **Line Spacing Options** at the bottom of the menu, and in the dialog box, set a specific value.
6. Click OK to apply the changes.

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

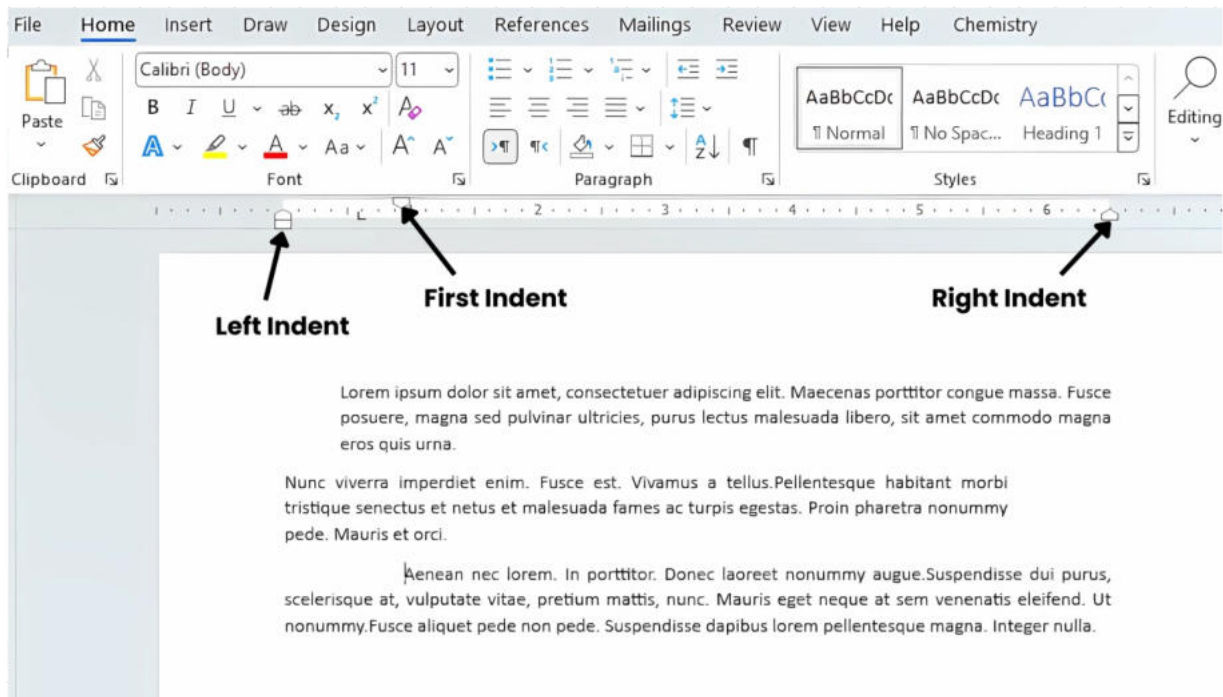

INDENTATION

Indentation refers to adding space at the beginning of a paragraph. This makes the document look neat and helps to distinguish between sections of text.

Steps to Apply Indentation in MS Word:

1. Place the cursor at the beginning of the paragraph you want to indent.
2. Go to the Home tab in the toolbar.
3. In the Paragraph group, click the **Increase Indent** button (an arrow pointing right).
 - You can also use the keyboard shortcut **Tab** to indent the first line of a paragraph.
4. To decrease the indentation, click the **Decrease Indent** button (an arrow pointing left).
5. For precise control, right-click the paragraph, select **Paragraph**, and adjust the Indentation settings manually in the dialog box.

INDENTATION TYPES IN MS WORD

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

1. Left Indent:

- Moves the entire paragraph away from the left margin.
- **Example:** Paragraph shifted 0.5 inches from the left edge.

2. Right Indent:

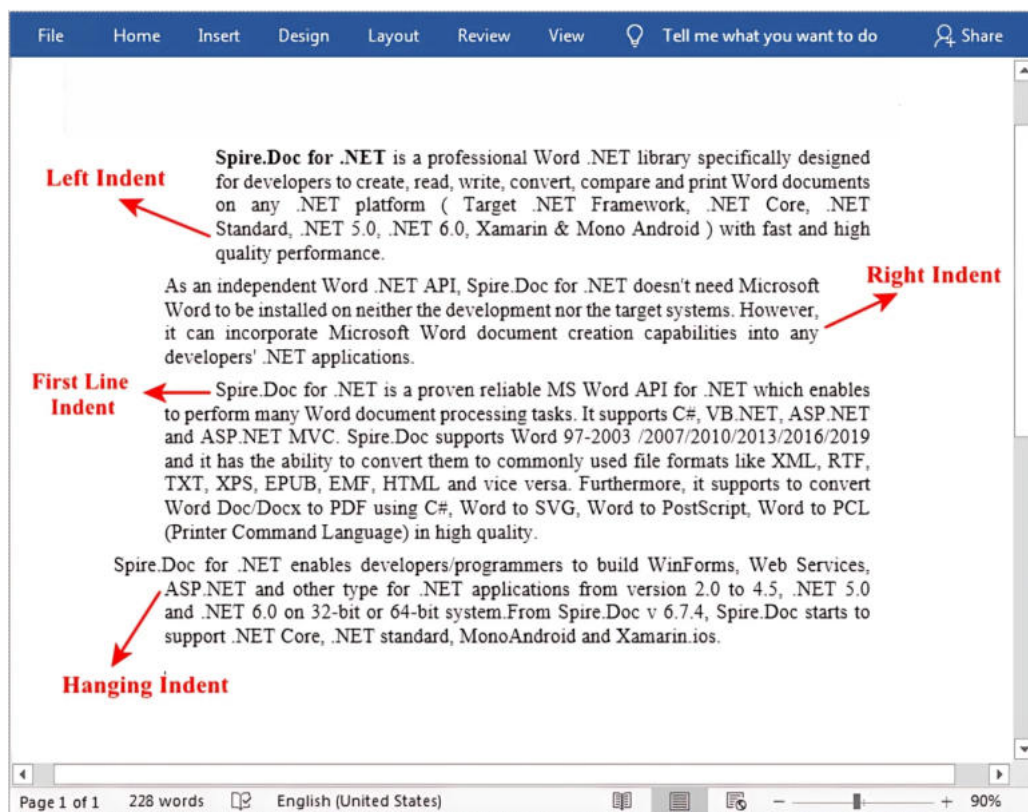

- Moves the paragraph away from the right margin.
- **Example:** Paragraph shifted 0.5 inches from the right edge.

3. First Line Indent:

- Indents only the first line of the paragraph.
- **Example:** First line moved 0.5 inches inward.

4. Hanging Indent:

- A hanging indent is when the first line of a paragraph is at the normal starting position but all the other lines of the paragraph are slightly moved to the right.

Combining Indentation Types

You can combine these indentation types to create a structured and visually appealing layout.

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

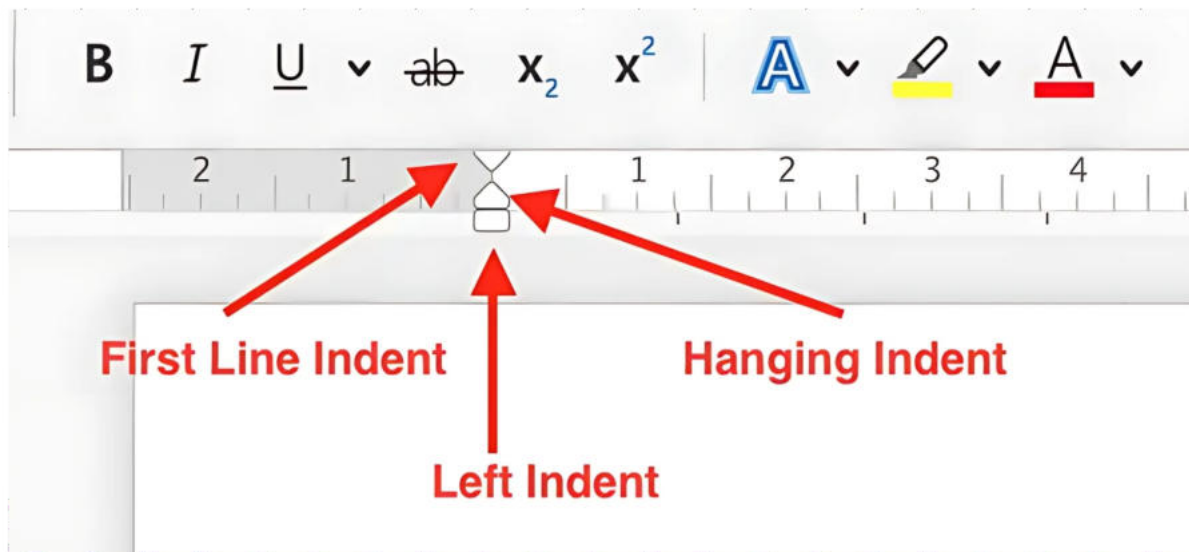

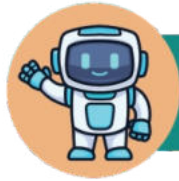

USING RULER FOR INDENTATION

1. Display the Ruler: If the ruler is not visible, go to the View tab and check the Ruler option.

2. Adjust Indentation:

- Drag the left indent marker (small rectangle) to adjust the left indent.
- Drag the first line indent marker (small triangle) to adjust the first line indent.
- Drag the right indent marker (small rectangle on the right side) to adjust the right indent.

EXERCISE 1

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

Choose the correct answer.

1. What is the purpose of superscript in MS Word?

A To make text smaller and raise it above the line

B To make text bold

C To align text to the centre

D To change text color

2. Which shortcut applies subscript in MS Word?

A Ctrl + Shift + +

B Ctrl + Shift + S

C Ctrl + =

D Ctrl + Alt + =

3. What is the default line spacing option in most MS Word documents?

A 1.0

B 1.5

C 2.0

D 3.0

4. Which indentation moves only the first line of a paragraph inward?

A Left Indent

B Right Indent

C First Line Indent

D Center Indent

5. Which tool in MS Word allows you to adjust line spacing in a paragraph?

A Font group

B Insert tab

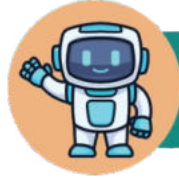

C Line and Paragraph Spacing icon

D View tab

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

EXERCISE 2

Mark "True" or "False".

TRUE

FALSE

Superscript is commonly used in mathematical expressions.

☐☐

Subscript lowers text below the main line, often used for exponents in equations.

☐☐

Line spacing cannot be customized in MS Word; you must use default options.

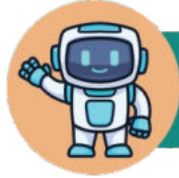

☐☐

Right indent pushes the paragraph away from the left margin.

☐☐

The ruler in MS Word can be used to adjust indentation settings manually.

☐☐

EXERCISE 3

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

Fill in the blanks.

1. The keyboard shortcut for applying superscript is _____.
2. _____ spacing refers to the space between lines in a paragraph.
3. _____ is often used in scientific formulas to show elements and quantities, such as H₂O.
4. _____ indent moves the entire paragraph away from the left margin.
5. To adjust the line spacing, go to the _____ tab and select the Line and Paragraph Spacing icon.

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

Answer the following questions.

- 1. What is the difference between superscript and subscript in MS Word?**
- 2. How does adjusting line spacing affect the readability of a document?**
- 3. Describe the steps to apply a first-line indent in a paragraph.**
- 4. How can the ruler be used to modify indentation in MS Word?**
- 5. Why is it important to use indentation in formal documents?**

This image shows a blank sheet of white paper with horizontal ruling lines. The lines are evenly spaced and extend across the width of the page. There are no margins, text, or other markings on the paper.

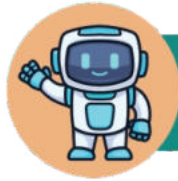

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

UNIT 4

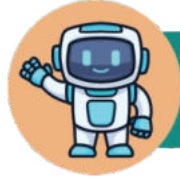

ADVANCED TEXT FORMATTING IN MS WORD

EXERCISE 5

Match the following terms with their descriptions.

Term	Description
Superscript	Creates space to the left side of a paragraph
Subscript	Moves text below the line for chemical formulas or footnotes
Line Spacing	Space at the beginning of a paragraph
Left Indent	Changes space between lines of text
First Line Indent	Pushes the paragraph away from the right margin
Right Indent	Reduces text size and moves it above the line for exponents or citations
Indentation	Moves only the first line of a paragraph inward

EXERCISE 6

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

Unscramble the following terms related to MS Word formatting features.

CRPESRSUTPI

CSUBPSITR

INDETIOINA

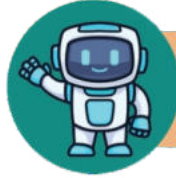

NIEL GAPSCNI

MGARTINFTO

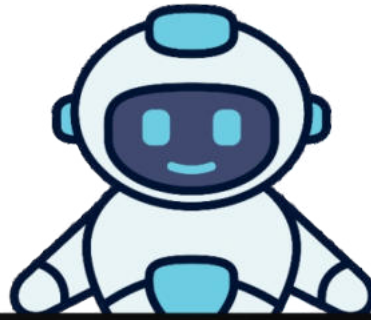

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

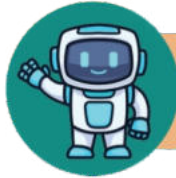

LAB ACTIVITY

Format a short paragraph using superscript, subscript, line spacing, and indenting.

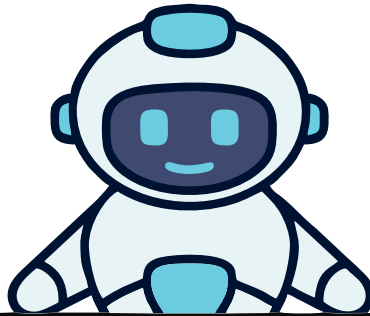

1. Write the sentence "Water is H₂O and Carbon Dioxide is CO₂" in MS Word.
2. Format the chemical formulas using subscript.
3. Add any equation and format the exponent using superscript.
4. Change the line spacing of the paragraph to 1.5.
5. Indent the paragraph by 0.5 inches.

LAB ACTIVITY

CREATING A FORMAL OR INFORMAL LETTER

Write and format a formal or informal letter using MS Word.

1. Open a new document in MS Word.
2. Write a formal or informal letter starting with your address at the top right corner, followed by the date, and then the recipient's address on the left.
3. Begin the letter with "Dear [Recipient's Name]," followed by a brief introduction and a body with at least three sentences.
4. Format the letter using proper indentation for the first line of each paragraph.
5. Use line spacing of 1.5 for the entire letter.
6. End the letter with "Sincerely," followed by your name.

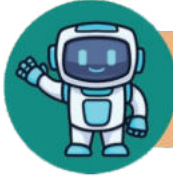

UNIT 4

ADVANCED TEXT FORMATTING IN MS WORD

UNIT 4

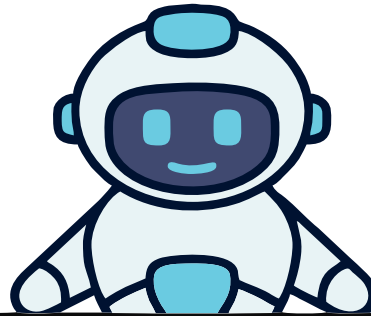

ADVANCED TEXT FORMATTING IN MS WORD

LAB ACTIVITY

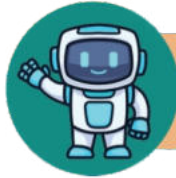

WRITING ABOUT YOUR FAVOURITE BOOK

Write a brief description of your favourite book and format the document using MS Word.

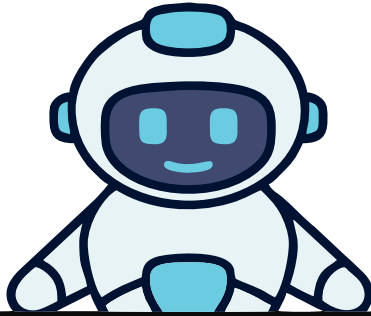

1. Open a new document in MS Word.
2. Create a title page with the title "My Favourite Book" centered at the top of the page.
3. Write a short paragraph about your favourite book. Make sure to include the book title, author, and a brief description.
4. Format the book title in italics.
5. After the paragraph, use bullet points to list three reasons why you recommend the book.
6. Set the line spacing of the entire document to 1.5.
7. Indent the first line of your paragraph by 0.5 inches for proper formatting.

LAB ACTIVITY

WRITING A RECIPE

Create and format a recipe using MS Word.

1. Open a new document in MS Word and title it "My Favourite Recipe."
2. Write the name of the recipe at the top in bold, followed by a list of ingredients.
3. List the ingredients using bullet points.
4. Write the cooking instructions in numbered steps.
5. Use subscript for any measurements that require it (e.g., "2 cups of H₂O" should have "2" as subscript).
6. Set the line spacing for the entire document to 1.5.
7. Indent the instructions by 0.5 inches to create a clear separation from the ingredients.

UNIT 4
