

4

DIVISION

$$\frac{4}{5} \div \frac{1}{2} = \frac{8}{5}$$
$$\begin{array}{r} 8 \\ \div 2 \\ \hline \end{array}$$

● Division by 1-digit numbers (Review)

- Division, being the inverse operation of multiplication, is the process of finding how many times a divisor (the number which divides) can be taken from the dividend (the number being divided).
- **Dividend:** The number to be divided.
- **Divisor:** The number which divides the dividend.
- **Quotient:** The result obtained by dividing.
- **Remainder:** The number left which cannot be divided further.

For example:

$$36 \div 4$$

Here, **36** is the dividend, **4** is the divisor.

		9	← Quotient
Divisor →	4	$\begin{array}{r} 36 \\ - 36 \\ \hline 0 \end{array}$	← Dividend
		0	← Remainder

- The division is complete with a quotient of **9** and a remainder of **0**.

DIVISION

- **Multiply to Check.**

- To verify the division, we can multiply the quotient by the divisor and add the remainder:

$$\text{Quotient} \times \text{Divisor} + \text{Remainder} = \text{Dividend}$$

$$9 \times 4 + 0 = 36$$

- **Divide the following and find the quotient.**

$$\boxed{72} \div \boxed{8} = \boxed{}$$

$$\boxed{48} \div \boxed{6} = \boxed{}$$

$$\boxed{35} \div \boxed{5} = \boxed{}$$

$$\boxed{54} \div \boxed{7} = \boxed{}$$

$$\boxed{81} \div \boxed{9} = \boxed{}$$

DIVISION

- Divide the following and find the quotient and remainder.

$$5 \overline{) 56}$$

$$3 \overline{) 81}$$

$$3 \overline{) 36}$$

$$2 \overline{) 46}$$

$$2 \overline{) 26}$$

$$3 \overline{) 72}$$

DIVISION

- Divide the following and find the quotient and remainder.

$$3 \overline{)100}$$

$$5 \overline{)451}$$

$$7 \overline{)534}$$

$$8 \overline{)490}$$

$$4 \overline{)234}$$

$$7 \overline{)239}$$

DIVISION

$$6 \overline{)693}$$

$$6 \overline{)478}$$

$$4 \overline{)356}$$

$$6 \overline{)129}$$

$$8 \overline{)187}$$

$$9 \overline{)582}$$

DIVISION

- Let us see what happens when a number (for example, **52,000**) is divided by **10** and its multiples, such as **100**, **1,000**, **10,000**.

Numbers	TTh	Th	H	T	U
$\div 10$	0	5	2	0	0
$\div 100$	0	0	5	2	0
$\div 1,000$	0	0	0	5	2
$\div 10,000$	0	0	0	0	5.2

Explanation:

When we divide a number by 10, we move the digits **one column to the right**.

When we divide a number by 100, we move the digits **two columns to the right**.

When we divide a number by 1,000, we move the digits **three columns to the right**.

When we divide a number by 10,000, we move the digits **four columns to the right**.

- **Divide 76 by 10.**

- **Multiply:** $7 \times 10 = 70$.

Subtract: $76 - 70 = 6$.

The quotient is 7, and the remainder is 6.

So, $76 \div 10 = 7 \text{ R } 6$.

- **$76 \div 10$**

Solution:

$$\begin{array}{r} 7 \\ 10 \overline{) 76} \\ \underline{-70} \\ 6 \end{array}$$

- **Divide 868 by 10.**

Solution:

$$\begin{array}{r} 86 \text{ ← Quotient} \\ \text{Divisor → } 10 \overline{) 868} \text{ ← Dividend} \\ \underline{-800} \\ 68 \\ \underline{-60} \\ 8 \text{ ← Remainder} \end{array}$$

DIVISION

- Divide 396 by 100.

Solution:

$$\begin{array}{r} \text{Divisor} \longrightarrow 100 \quad \begin{array}{r} 3 \longleftarrow \text{Quotient} \\ 396 \longleftarrow \text{Dividend} \\ - 300 \\ \hline 96 \longleftarrow \text{Remainder} \end{array} \end{array}$$

- Divide 4129 by 1000.

Solution:

$$\begin{array}{r} \text{Divisor} \longrightarrow 1000 \quad \begin{array}{r} 4 \longleftarrow \text{Quotient} \\ 4129 \longleftarrow \text{Dividend} \\ - 4000 \\ \hline 126 \longleftarrow \text{Remainder} \end{array} \end{array}$$

Multiply: $4 \times 1000 = 4000$.

Subtract: $4129 - 4000 = 129$.

The quotient is 4, and the remainder is 129.

So, $4126 \div 1000 = 4 \text{ R } 129$.

DIVISION

- Divide the following and find the quotient and remainder.

4,800	÷	10	=	
56,000	÷	100	=	
87,000	÷	1,000	=	
93,740	÷	10	=	
18,420	÷	900	=	
2,120,320	÷	400	=	
43,694	÷	100	=	
749,860	÷	1000	=	

DIVISION

- Divide the following.

$$3 \overline{)7,062}$$

$$9 \overline{)1,824}$$

$$3 \overline{)3,622}$$

$$7 \overline{)8,331}$$

$$6 \overline{)9,170}$$

$$3 \overline{)2,009}$$

• Word Problems

Q1: A farmer has 144 apples and wants to share them equally among 12 baskets. How many apples will be in each basket?

Q2: A teacher has 324 candies and wants to distribute them equally among 9 children. How many candies will each child receive?

DIVISION

Q3: There are 1,200 books in a library, and the librarian wants to arrange them equally on 100 shelves. How many books will be on each shelf?

Q4: A baker has 95 cookies and wants to pack them equally into 5 boxes. How many cookies will be in each box?

Q5: There are 2,376 cars to be parked equally in 9 rows. How many cars will be parked in each row?

Q6: A stationery store has 1,480 pencils and packs them equally into 20 packets. How many pencils are in each packet?
