

GLOSSARY

UNIT 01: ANIMAL CLASSIFICATION

- **Animal** – A living thing that moves and grows.
- **Backbone** – The bones in the back that support the body.
- **Fur** – Soft hair on some animal's bodies.
- **Warm-blooded** – Animals that keep their body warm all the time.
- **Cold-blooded** – Animals whose body temperature changes with the weather.
- **Scales** – Small, hard skin covering some animals like fish and snakes.
- **Adult** – A fully grown animal or person.
- **Stings** – A sharp pain caused by an insect or plant.

UNIT 02: LIFE CYCLES OF A BUTTERFLY AND A FROG

- **Larva** – A young insect that looks different from an adult.
- **Chrysalis** – The hard shell where a caterpillar changes into a butterfly.
- **Caterpillar** – A small, worm-like insect that becomes a butterfly or moth.
- **Frogspawn** – A group of jelly-like eggs laid by a frog in water.

UNIT 03: THE HUMAN BODY

- **Blood cells** – Tiny parts in blood that carry oxygen and fight germs.
- **Muscles** – Body parts that help us move and stay strong.
- **Organs** – Important body parts inside us, like the heart and lungs.
- **Windpipe** – The tube that carries air to the lungs.

UNIT 04: LAYERS OF EARTH

- **Earthquakes** – The shaking of the ground.
- **Volcanic eruptions** – When a volcano throws out hot lava and smoke.
- **Molten metal** – Metal that is melted by heat.
- **Granite** – A hard rock found in mountains.
- **Tectonic plates** – Huge pieces of Earth's crust that move slowly.
- **Ocean floor** – The bottom part of the sea.
- **Solar radiation** – Heat and light coming from the Sun.

UNIT 05: ROCKS

- **Magma or lava** – Hot, melted rock from inside the Earth.
- **Underwater** – Something that is below the water.
- **Metamorphic rocks** – Rocks that change form due to heat and pressure.

- **Sedimentary rocks** – Rocks made from layers of sand, mud, and tiny pieces of other rocks.
- **Fossils** – Old remains of plants or animals found in rocks.
- **Organic material** – Parts of living things, like plants and animals.
- **Cemented** – Stuck or glued together tightly.
- **Fossils** – Old remains of plants or animals found in rocks.

UNIT 06: SOIL

- **Dead plants** – Plants that are no longer alive.
- **Decayed plants** – Plants that have rotted and broken down.
- **Earthworms** – Small worms that live in the soil and help it stay healthy.
- **Fertile soil** – Soil that is rich in nutrients and good for growing plants.
- **Silt** – Very tiny pieces of rock and soil that make the land soft.

UNIT 07: ELECTRICITY AND MAGNETISM

- **Electricity** – Energy that makes lights and machines work.
- **Magnetism** – A force that pulls metal objects together.

- **Cozy** – Warm, comfortable, and nice.
- **Metals** – Hard, shiny materials used to make things like coins and tools.

UNIT 08: MIXTURES AND SOLUTIONS

- **Mixture** – Two or more things mixed together but can be separated.
- **Solution** – A mixture where one thing dissolves in another.
- **Solute** – The thing that dissolves in a solution, like sugar in water.
- **Solvent** – The liquid that dissolves something, like water for sugar.

UNIT 09: THE SOLAR SYSTEM

- **Planets** – Large round objects that move around the Sun.
- **Asteroids** – Small rocky objects that move in space.
- **Comets** – Bright space objects with tails made of ice and dust.
