

UNIT 5

MS EXCEL WITH BASIC FUNCTIONS AND FORMATTING

Learning Objectives

- Learn to enter and format data in Excel cells.
- Use basic functions, like SUM, to perform calculations.
- Apply cell formatting to adjust text size, colour, and data type.
- Practise using these skills in simple data projects.

In Grade 4, we learned the basic layout of MS Excel, understanding key components of the interface such as the Title Bar, Ribbon, Formula Bar, and Worksheet Area. This gave us an overview of how to navigate Excel and locate important tools. Now, in Grade 5, we'll start working directly with data by learning to enter information in cells, format cells for readability, and use basic functions like SUM to perform simple calculations. These skills will help you organize data and make quick calculations in Excel.

Entering Data and Basic Cell Formatting

In Excel, you enter information (text, numbers, dates) into cells to create tables, lists, and other data structures.

Entering Data

1. Click on a cell where you want to enter data.
2. Type text or numbers and press **Enter**.

Basic Cell Formatting

Formatting cells makes data easier to read and visually appealing.

- **Text and Number Formatting:** Change font style, size, or colour to improve readability.
- **Alignment:** Align text to the left, centre, or right within a cell.
- **Borders:** Add borders around cells or groups of cells to create table-like structures.

Steps:

1. Select the cell or range of cells you want to format.
2. Go to the **Home** tab where you'll find options to adjust font, colour, alignment, and borders.

Using Basic Functions (SUM)

Excel has built-in functions that make calculations simple. The **SUM** function adds up a range of numbers.

In MS Excel, there are several ways to use the SUM function to add numbers.

1. Using the SUM Function from the Ribbon

1. Click on the cell where you want the result to appear.
2. Go to the **Home** tab on the Ribbon.
3. In the **Editing** group, click on **AutoSum** (Σ).
4. Excel will automatically select a range of cells to add. If needed, adjust the selection by clicking and dragging over the desired cells.
5. Press **Enter** to complete the calculation.

SCAN ME

2. Using the SUM Function in the Formula Bar

1. Select the cell where you want the result to appear.
2. Click into the **Formula Bar** located just below the Ribbon.
3. Type =SUM(and then select the range of cells to add.
4. Close the brackets and press **Enter**.

3. Manually Typing a SUM Formula for Non-Adjacent Cells

1. Click on the cell where you want the result to appear.
2. Type =SUM(and then manually select or type the cells you want to add. For non-adjacent cells, separate them with commas. For example: =SUM(A1, B3, C5).
3. Close the brackets and press Enter.

4. Using the SUM Function for Multiple Ranges

1. Select the cell where you want the result to appear.
2. Type =SUM(and select the first range of cells (e.g., A1:A5).
3. Type a comma, select the second range (e.g., B1:B5), and so on for additional ranges.
4. Close the parentheses and press Enter.

These methods allow flexibility when using the SUM function to add numbers, whether in continuous ranges or separate cells.

Simple Formatting by Data Type

Formatting by data type ensures data displays correctly.

- **Text:** For labels or names.
- **Number:** For general numbers; allows options for decimal places.
- **Currency:** Adds a currency symbol (e.g., \$10.00).
- **Date:** Formats entries as dates (e.g., 01/01/2024).

Steps:

1. Select the cell(s) you want to format.
2. In the **Home** tab, go to **Number Format** and choose the data type.

SUM	✓	✗	✓	fx	=SUM(E3:E12)		
	A	B	C	D	E	F	G
2	Id No.	Name	Gender	Age	Working Days	Joining Data	Salary
3	1001	Ahmed	Male	18	15	1/1/2024	\$25,000.00
4	1002	Yasir	Male	19	25	6/2/2024	\$35,000.00
5	1003	S.Alamdar	Male	21	20	9/3/2024	\$15,000.00
6	1004	A.Nafay	Male	23	18	6/4/2024	\$36,000.00
7	1005	M.Ibrahim	Male	24	11	8/5/2024	\$45,000.00
8	1006	M.Hasnain	Male	21	5	10/6/2024	\$18,000.00
9	1007	S.Shanzeh	Female	20	29	6/7/2024	\$85,000.00
10	1008	Ayesha	Female	26	28	5/8/2024	\$15,000.00
11	1009	Fatima	Female	30	10	3/9/2024	\$25,000.00
12	1010	M.Bilal	Male	28	8	2/10/2024	\$15,000.00
13					=SUM(E3:E12)		

EXERCISES

01: Choose the correct answer.

1. Where can you find the AutoSum (Σ) button in Excel?

- a) Insert tab
- b) Home tab
- c) Data tab
- d) View tab

2. Which symbol do you use to start any formula in Excel?

- a) +
- b) *
- c) =
- d) &

3. Which data type should you select to display prices with a dollar sign?

- a) Number
- b) Text
- c) Currency
- d) Date

4. Which feature in the Home tab is used to change the text colour?

- a) Borders
- b) Font Colour
- c) Alignment
- d) Number Format

5. What does the SUM function do?

- a) Adds up numbers
- b) Multiplies numbers
- c) Formats cells
- d) Inserts charts

02: Fill in the blanks.

1. The _____ data type adds a currency symbol, like \$ or €, to numbers.
2. You use the _____ function to add a group of numbers in Excel.
3. To make text bold, go to the Home tab and click on the _____ button.
4. The symbol used to start a formula in Excel is _____.
5. The area where you enter data in Excel is called a _____.

03: Write True or False for each statement.

	TRUE	FALSE
The AutoSum button in the Home tab can add numbers automatically.	☐	☐
To enter data in Excel, you type in the cell and press Tab .	☐	☐
Text data is used only for numbers.	☐	☐
Formatting by data type helps display data correctly.	☐	☐
The SUM function can only add cells in one column.	☐	☐

04: Answer the following questions.

1. What is the purpose of the SUM function in Excel?
2. How can you add a border around cells to create a table-like look?
3. How do you format a cell as Currency in Excel?
4. What is the purpose of the Text data type in Excel?
5. Describe how to use the Formula Bar to enter a SUM function.

[illegible]

[illegible]

05: Match the column.

Column A
SUM
Text
Currency
Date
Merge

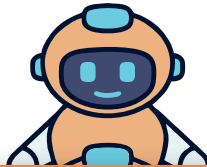

Column B
Adds a currency symbol
Used for dates
Combines selected cells
Adds up numbers
For words, names, or labels

Know the Short Keys and Abbreviations:

1. **Ctrl + C**: Copy selected data.
2. **Ctrl + V**: Paste copied data.
3. **Ctrl + Z**: Undo last action.
4. **F2**: Edit the selected cell.
5. **Ctrl + B**: Make selected text bold .

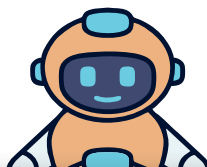

LAB ACTIVITIES

Lab Activity 1: Creating and Formatting a Simple Table

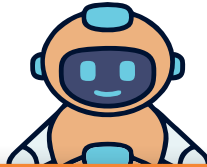

1. Create a list of 5 items and their prices in two columns.
2. Change the text colour of item names to blue and format the prices as Currency.
3. Add borders around the table to make it look clear and organized.

Lab Activity 2: Using the SUM Function with AutoSum

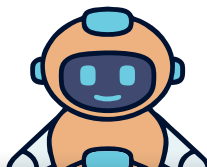

1. Create a table listing 5 different fruits and their quantities in two columns.
2. Use the AutoSum button to calculate the total quantity of all fruits.
3. Verify the result by adding the same cells using the Formula Bar.

Lab Activity 3: Formatting by Data Type

1. Enter the names of 4 friends in one column, their birthdays in the next column, and amounts they donated in the third column.
2. Format the names as Text, birthdays as Date, and donations as Currency.
3. Add borders around the table to organize the information.

Lab Activity 4: Using SUM for Non-Adjacent Cells

1. Create a table listing 3 types of expenses (e.g., food, transportation, entertainment) and their amounts in different cells (e.g., A1, B3, C5).
2. Use the SUM function to add these amounts by typing `=SUM(A1, B3, C5)`.
3. Format the result as Currency and add a border around the final total cell.
