

UNIT 6

CRAFTING PROFESSIONAL PRESENTATIONS IN MS POWERPOINT

Learning Objectives

- **Develop consistent presentation layouts using Slide Masters.**
- **Organize slides efficiently with Sections.**
- **Apply basic design principles to create visually appealing presentations.**

In Grade 4, we learned the basics of creating and editing presentations. Now, we'll take it a step further by learning to design professional presentations with consistent layouts, clear structure, and thoughtful design choices. This will help you communicate your message effectively to any audience.

Know This:

PowerPoint 2016, 2019, 2021 and even Office 365 (now called Microsoft 365) share similar interface elements, but the design and functionality can vary slightly with newer updates.

Using Slide Masters

What is a Slide Master?

A Slide Master allows you to set up a uniform style for your entire presentation. Changes made to the Slide Master will automatically apply to every slide, helping keep a consistent look.

Steps to Use the Slide Master:

1. Open the Slide Master:

- Go to the **View** tab and select **Slide Master**.

- This view shows the master slide and layouts underneath.

2. Edit the Slide Master:

- Change fonts, colours, or backgrounds on the Slide Master, and it will apply to all slides.

3. Creating Custom Layouts:

- Add new layouts under the Slide Master if you want different styles for specific slides.

4. Close the Slide Master:

- Click on the **Close Master View** button once you're done. Now, all slides in your presentation will follow the styles you set.

Organizing Slides with Sections

In larger presentations, sections can help you manage and organize slides into logical parts.

How to Add and Use Sections:

1. Add a Section:

- Right-click between slides in the left slide panel, then select **Add Section**.
- Give your section a name that represents its content, like "Introduction" or "Conclusion."

2. Manage Sections:

- Right-click on a section name to rename, expand, or collapse it.

3. Benefits of Using Sections:

- Sections make it easier to navigate and keep track of slides, especially in long presentations.

Design Principles for Slides

Creating a professional look is about more than just applying themes. Here are key principles for designing slides:

1. Use of Whitespace:

- Leave some empty spaces around your content.

This helps make your slides look less cluttered.

2. Colour and Contrast:

- Choose colours that make text easy to read against the background. Use contrast to highlight key points.

3. Font Selection:

- Choose simple fonts like Arial or Calibri for readability.

Avoid using too many font types or sizes.

LAB ACTIVITIES

Lab Activity 1:

SCAN ME

1. Create a new presentation with at least five slides.
2. Use the Slide Master to set a background and font style for the entire presentation.
3. Organize slides into two sections, naming them "Introduction" and "Main Content."
4. Apply design principles learned in this chapter.

Lab Activity 2: Creating a Consistent Slide Layout Using Slide Masters

Objective: To create a uniform look across slides.

Instructions:

Open a new PowerPoint file, go to the **Slide Master** view, and select a theme. Customize the Slide Master by changing the font style and background colour. Add a logo or watermark to the Slide Master and close the view to apply changes to all slides. Save the presentation and present your layout.

Lab Activity 3: Organizing Slides into Sections

Objective: To learn how to manage and organize slides using sections.

Instructions:

Create a presentation with at least ten slides. Divide the slides into three sections—Introduction, Body, and Conclusion. Name each section accordingly and collapse/expand sections to see how organization improves slide navigation.

Lab Activity 4: Designing a Slide with Effective Colour and Font Choices

Objective: To understand the impact of design choices on readability and aesthetics.

Instructions:

Create a slide that includes a title, a paragraph of text, and an image. Apply a colour scheme with good contrast between text and background. Experiment with different fonts and sizes to see which ones are most readable. Present your slide and explain your design choices.

Lab Activity 5: Applying Design Principles: Whitespace and Alignment

Objective: To learn how whitespace and alignment affect presentation design.

Instructions: Create two versions of a slide on any topic. In one version, fill the slide with text and images without spacing. In the second version, use whitespace effectively, align text and images properly, and keep it uncluttered. Present both versions to the class and discuss the impact of whitespace on readability.
