

UNIT 3

OFFICE AUTOMATION

Q.1: DISCUSS THE PAGE LAYOUT TAB IN MS WORD. HOW MANY GROUPS DOES THIS TAB HAVE? NAME THEM.

PAGE LAYOUT TAB:

The Page Layout Tab allows user to control the look and feel of his or her document. User can Set margins, apply themes control page orientation and size, add sections and line breaks, display line numbers, and set paragraph indentation and lines.

The Page Layout tab has five groups of related commands namely:

- (i) Themes
- (ii) Page Setup
- (iii) Page Background
- (iv) Paragraph
- (v) Arrange

Q.2: LIST FOUR USES OF SPREAD SHEETS IN BUSINESS.

Common uses of spreadsheets in business are:

- (i) storing data
for example: a list of clients, contact information, employee time sheets, sales, and purchases.
- (ii) manipulate and analyze data
- (iii) presentation/visualization
- (iv) modeling and planning
- (v) business accounts and budgeting
- (viii) statistical analysis and reports making.
- (vii) preparing wages
- (vi) making invoices

Q.3: WHY DO WE USE WATERMARK IN A DOCUMENT? GIVE SOME EXAMPLES OF WATERMARKS. HOW CAN WE USE WATERMARK IN MS WORD?

WATERMARK IN A DOCUMENT:

A watermark is a faded background image that displays behind the text in a document. It is simply that image or text that appears mainly behind the main document. watermarks are normally used to prevent counterfeiting. What water marking does is to prevent or make it difficult for people to use these documents as their own. Microsoft Word has some in built watermarks that can be chosen. For instance, the in built watermarks options include draft, confidential and other functionalities. For instance, watermark documents will normally display the status of the document like "confidential", 'Draft" among others. It is important to note that watermarks can be inform of texts or even images like logo, pictures and other things of value.

WATERMARK (HOTKEY: ALT +P+P+W):

This button is used to insert logos, images or text behind the contents of adage.

Q.4: DISCUSS TOC. HOW CAN IT BE USED IN MS WORD?**TABLE OF CONTENTS(TOC):**

A Table of Contents (ToC) is an organized listing of the sections, groups and headings of content in a document and identified by page numbers where they are placed. It provides an overview of the document and allows readers to go directly to specific section or content in the document. ToC usually appears after the Title Page in a document. MS word2010 provides an advanced feature for automatically creating a ToC.

A user can create an Automatic or a Manual table of contents in a document. To create a Table of Contents in MS Word document, go to the References Tab where Table of Contents button appears as the first option of that tab. MS Word provides several options of creating a ToC that include Automatic Table creation, Manual Table creation or the user can even create a Customized Table of Contents based on the requirements of the document.

(I)AUTOMATIC, TABLE:

Automatic Tables creates a Table of Contents automatically based on the content used as Heading presets of MS word on the type of Heading, Automatic Table of Contents will create the appropriate levels and show page numbers where those Headings are placed. The only difference between Automatic Table 1 and Automatic Table 2 is the title of the table that is "Contents" or "Table of Contents".

(II)MANUAL TABLE:

Choosing Manual Table from the Table of Contents menu will create a template of a generic table of contents. This table will need to be edited and defined manually by providing all the headings, sub- headings and page numbers. To extend the table, simply copy and paste the template lines and edit them to preserve proper formatting. on the type of Heading, Automatic Table of Contents will create the appropriate levels and show page numbers where those Headings are placed. The only difference between Automatic Table 1 and Automatic Table 2 is the title of the table that is "Contents" or "Table of Contents"

Q.5: WHAT IS A WORD PROCESSOR? WRITE ANY THREE APPLICATIONS OF A WORD PROCESSOR.**WORD PROCESSOR:**

Word Processing refers to the act of using a computer to create, edit, save and print documents. In order to perform word processing, specialized software (known as a Word Processor) is needed. One example of a Word Processor is Microsoft Word, but other word processing applications are also widely used. Examples include: Microsoft Works Word Processor, Open Office Writer, Word Perfect and Google Drive Document.

APPLICATIONS OF A WORD PROCESSOR:

A Word Processor allows users to create a wide variety of documents including (but certainly not limited to) reports, letters, memos, newsletters and brochure. In addition to typing text, the word processor allows us to add content such as pictures, tables, and charts to our documents as well as decorative items including borders and clipart.

The editing and formatting capabilities of the word processor demonstrate the application's true power. Text can be inserted, edited, moved, copied or deleted within our document and the appearance of the text can be modified in numerous ways. Most word processors also give us the ability to check our spelling and grammar and many have built in dictionaries and other tools to assist us in our writing.

Q.6: DISCUSS THE MARGINS AND PAPER SIZE OPTIONS IN THE PAGE SETUP GROUP.**MARGINS (HOTKEY: ALT+P+M):**

A margin is the area or space between the main content of a page the page edges. This button is used to change the margins of the entire document or selected section.

Size (HOTKEY: ALT+P+S+Z);

The size button is used to choose the size of the paper for current section or entire document.

Q.7: NAME AND DESCRIBE TWO OPTIONS IN ORIENTATIONS.**ORIENTATION (HOTKEY: ALT + P+O):**

Page orientation or print orientation is the placement of contents on a page. This button sets the contents of the page or section in portrait (Vertical) layouts or landscape (Horizontal).

Q.8: LIST AND DEFINE POSITION AND WRAP TEXT OPTIONS IN ARRANGE GROUP.**POSITION (HOTKEY: ALT+P+P+O):**

Position is used to place an object (picture or shape) on the page Position wherever you want.

Wrap Text (HOTKEY: ALT + P + T + W):

Text wrapping is used to arrange the text around an object like an image.

Q.9: WHAT DO YOU KNOW ABOUT MS WORD?**MS WORD:**

Microsoft Word (MS Word) is one of the most famous word-processing software. It was first released and made public in early 1980s by Microsoft. It allows its user to type text and manipulate it. MS Word first introduced the concept of WYSIWYG (What You See Is What You Get) by introducing text formatting and document preview exactly as we would get it on a paper. It has advanced features like tables, images, advanced formatting and reviewing that give its users the ability to customize their documents

as required. Latest versions of MS Word come as a part of Microsoft Office Suite (which includes other software as well like MS Excel and MS Power Point). MS Word is still most widely used word-processing software in the world.
