Q.2: DEFINE AND EXPLAIN HTML (HYPERTEXT MARKUP LANGUAGE)?**HYPERTEXT MARKUP LANGUAGE (HTML):**

- HTML stands for Hypertext Markup Language.
- It is standard markup language for text documents.
- HTML is used to create web pages that are displayed by web browsers mainly on internet.

HTML consists of a series of elements. These elements tell the browser how to display the content. It allows the user to create structured content by adding headings, paragraphs, links, block quotes and other media.

- It takes advantage of simple code structures called tags and attributes to achieve formatting, graphic and navigation effects on web pages.

Q.3: WHAT ARE THE VARIOUS STEPS INVOLVED IN CREATING A WEB PAGE?**REQUIREMENTS:**

Creating a simple web page using HTML is very easy.

It requires:

1. A text editor
2. A file with .html extension and
3. A web browser to view that page.

Steps Involved In Creating Web Page In HTML

Step 1: Text Editor (e.g. Notepad):

- Start by simply creating a new blank file in a text editor of your choice.
 - A simple text editor like notepad can be used to start coding HTML for a web page.
- spot.com

Step 2: Write HTML code in Text Editor

Example Explained:

- The <html> element is the root element of an HTML page.
- The <head> element contains meta information about the HTML page.
- The <title> element specifies a title for the HTML page (which is shown in the browser's title bar or in the page's tab).
- The <body> element defines the document's body, and is a container for all the visible contents, such as headings, paragraphs, images, hyperlinks, tables, lists, etc.

Step 3: Save HTML Page:

- Go to File menu and click on Save.
- Make sure to provide .htm or .html extension for the file being saved.
- This will save the document as a web page instead of a plain text file.

Step 4: View HTML Page in Browser:

- Open the saved HTML file in your default web browser.
- The web browser will automatically translate HTML codes to correctly display the web page.
