9.	Display	To show or exhibit something, often for others to see or observe.	
10.	Dysfunction	Impaired or abnormal functioning of a body part, system, or organ.	
11.	Fatal	Resulting in death; deadly or causing extreme harm	
12.	Hygienic	Clean and promoting good health, particularly in terms of personal cleanliness and sanitation	
13.	Immune	Resistant or protected against a particular disease or infection	
14.	Infected	Affected by a disease-causing organism, such as bacteria or viruses.	
15.	Inflammation	A localized physical condition characterized by redness, swelling, heat, and often pain, as a response to injury or infection	
16.	Transmit	To pass on or transfer something, such as a disease or information, from one person or place to another	

17.	Vomiting	The act of forcefully expelling the contents of the stomach through the mouth.	
18.	Nausea	A feeling of sickness or discomfort in the stomach, often with an inclination to vomit.	
19.	Parasite	An organism that lives in or on another organism (the host) and benefits at the expense of the host	
20.	Polluted	Contaminated or made impure, often referring to the presence of harmful substances in the environment	
21.	Precaution	An action taken in advance to prevent or minimize harm or danger.	
22.	Preventable	Capable of being avoided or stopped by taking necessary measures or precautions	
23.	Prevention	The act of stopping something from happening or avoiding it altogether	
24.	Pronounced	Clearly and distinctly stated or emphasized	
25.	Repellant	A substance or device used to repel or keep away insects, pests, or other unwanted organisms	
26.	Replicate	To duplicate or reproduce something exactly	
27.	Respiratory	Relating to the process of breathing or the organs involved in respiration	
28.	Saliva	The watery fluid produced in the mouths of humans and animals that helps in the digestion of food	
29.	Severe	Extremely serious or intense; causing great discomfort, damage, or distress	
30.	Shivering	Involuntary shaking or trembling, often caused by cold, fear, or illness.	
31.	Stagnant	Not flowing or moving; lacking activity, progress, or development.	
32.	Symptom	A physical or mental indication or sign that suggests the presence of a disease or disorder	
32.	Transfusion	The process of transferring blood or other fluids from one person or organism to another, typically through medical procedures	

QUESTIONS AND ANSWERS

Q.1: What are the most common diseases transmitted by mosquito bites?

Ans: Malaria, dengue, and chikungunya are the most common diseases transmitted by mosquito bites.

Q.2: Which specific organ is highly affected by Cerebral Malaria?

Ans: Cerebral Malaria primarily affects the brain, leading to severe infection.

Q.3: How does malaria infection result in severe liver infection?

Ans: Malaria parasites infect red blood cells, causing them to burst and release more parasites. These parasites spread and infect more red blood cells, potentially leading to severe liver infection.

Q.4: How does dengue affect the immune system?

Ans: Dengue virus circulates in the body, targeting white blood cells and antibodies, thereby impacting the immune system.

Q.5: How frequently can one be infected with chikungunya? Why?

Ans: Chikungunya typically infects individuals only once. Once a person recovers from the infection, they develop lifelong immunity to it.

Q.6: Which two diseases have similar symptoms? What are these symptoms?

Ans: Chikungunya and dengue have similar symptoms and disease processes. These include fever, skin rashes, body pain, and headaches.

Q.7: How often does malaria cause fever and chills?

Ans: In cases of malaria, fever and chills typically occur every two days.

Q.8: How do these diseases impact our lives?

Ans: These diseases affect a person's health and can lead to weakness and fatigue, impacting their ability to perform daily tasks and work effectively.

Q.9: What preventive measures can be taken to protect against these diseases?

Ans: While there are no vaccines or specific medical prevention methods, the following measures can help protect against these diseases:

- Wear fully covered clothing.
- Use mosquito net coverings.
- Maintain hygienic surroundings.
- Eliminate stagnant water in the vicinity, including uncovered containers.
- Apply mosquito repellent lotions or use natural repellents.
- Take extra precautions during dawn and dusk.
- Seek medical help promptly if needed

Q.10: What steps can be taken for a quick recovery from these diseases?

Ans: To facilitate a speedy recovery from these diseases, it is important to seek immediate medical assistance upon observing any symptoms. Early treatment increases the chances of a quicker recovery.
