

UNIT 3

HABITATS OF ANIMALS

Learning objectives:

- Define habitat and its importance for animals.
- Identify different types of natural and man-made habitats.
- Classify animals based on their habitats.
- Explain how animals adapt to their specific habitats.
- Compare the features of different habitats.

Animals live in different places that provide them food, water, shelter, and a safe space to grow. These places where animals live are called **habitats**. Some habitats are made by nature, while others are made by humans.

Types of Habitats

There are two main types of habitats:

1. Natural Habitats – These are found in nature and include :

- | | | |
|------------------|---------------------|------------|
| 1) Forests | 2) Grasslands | 3) Deserts |
| 4) Polar regions | 5) bodies of water. | |

2. Man-made Habitats – These are created by humans, such as :

- | | | |
|----------|------------|--------------|
| 1) Farms | 2) Gardens | 3) Aquariums |
| 4) Zoos. | | |

- 1 **Natural Habitats:** Nature gives animals places to live and stay safe.

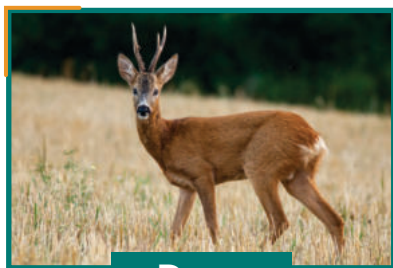

1. Forest

Forests are natural habitats that host wild animals like **tigers, monkeys, deer, snakes,** and many kinds of **birds** and **insects**.

Forests are densely covered with a variety of large trees and some small plants.

Tiger

Deer

Parrot

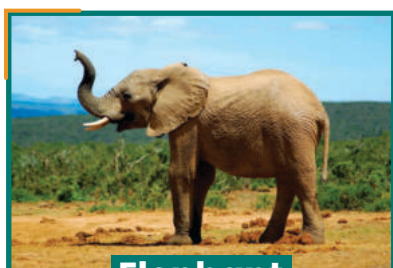

2. Grassland

Grasslands are natural habitats that host wild animals like **lions, elephants, cheetahs, kangaroos,** and many kinds of **birds** and **insects**.

Grasslands are covered with **grass** and **small plants,** with only a few **scattered trees**.

Tiger

Elephant

Kangaroo

3. Desert

Deserts are natural habitats that host animals like **snakes, camels, lizards**, and many types of **birds** and **insects**

Deserts are dry areas covered with **sand, rocks**, or even **ice**. Deserts have very few plants, like **cactus**.

Snake

Camel

Lizard

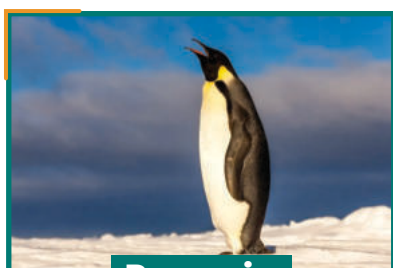

4. Polar Regions

Polar regions are natural habitats that host animals like **polar bears, penguins, foxes**, and very few types of birds. Polar regions are covered with **ice** and **snow** and have very few plants.

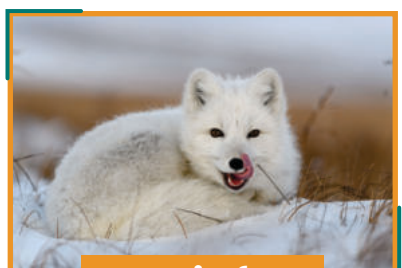

There are two polar regions: **North Pole** (Arctic) and **South Pole** (Antarctica). The **Arctic** is made up of **sea ice**, while **Antarctica** is a **land** covered in thick ice.

Polar Bear

Penguin

Arctic fox

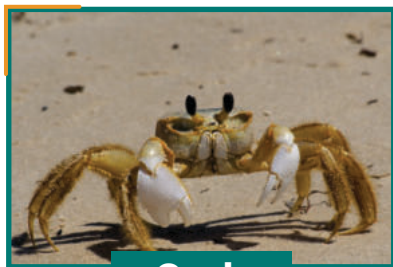

5. Bodies of Water

Bodies of water are natural habitats that host animals like **fishes, frogs, turtles, crabs, whales, sharks, dolphins, etc.**

Bodies of water include **oceans, rivers, lakes,** and **ponds,** where animals live in or near water.

Fish

Crab

Whale

2 Man-made Habitats: Humans create places where animals can live and be protected. Some examples are:

1. Farms – Farms are places where cows, chickens, and sheep live.

2. Zoos – Zoos are places where different animals from around the world are kept and taken care of.

3. Gardens – Gardens are places where insects, birds, and small animals find food and shelter.

4. Aquariums – Aquariums are water tanks where fish and water animals live.

Why Are Habitats Important?

Habitats are important because they give animals everything they need to live. They provide **food** to eat, **water** to drink, and **shelter** to rest and stay safe. Habitats also **protect** animals from danger and bad weather. Without a good habitat, animals would not survive. That is why we must take care of their homes.

Test Your Understanding

Q1: What is a habitat?

Ans: _____

Q2: How many types of habitats are there? Name them.

Ans: _____

Q3: Why do animals need a habitat?

Ans: _____

Q4: What is the difference between a forest and a grassland habitat?

Ans: _____

Q5: What are the two polar regions in the world?

Ans: _____

Q6: Why do fish need water to survive?

Ans: _____

Fill in the blanks.

1. A _____ is a place where animals live and find food.
2. _____ is a natural habitat covered with trees and plants.
3. Deserts have very few plants like _____.
4. The North Pole is also called the _____ region.
5. Animals like lions and elephants live in the _____.
6. A zoo is an example of a _____ habitat.

DO YOU KNOW?

The blue whale is the biggest animal that has ever lived in the ocean.

Tick (✓) for True and cross (x) for False statements.

1. Camels live in polar regions. ()

2. A farm is a natural habitat. ()

3. Fish can survive without water. ()

4. Tigers and monkeys live in forests. ()

5. Deserts are full of trees and lakes. ()

6. Zoos are man-made habitats. ()

Critical Thinking

Imagine if all the trees in a forest were cut down. What do you think would happen to the animals living there? Why do animals need different types of homes?

Choose the correct answer:

1. Why do polar bears have thick fur?

- a) To make them look fluffy
- b) To keep them warm in cold weather
- c) To help them climb trees

2. What helps camels survive in the desert?

- a) Their ability to store water
- b) Their long tails
- c) Their colorful feathers

3. Why do fish have gills?

- a) To help them run fast
- b) To help them breathe underwater
- c) To help them catch prey

4. How do forests help animals?

- a) By providing food and shelter
- b) By making them strong
- c) By keeping them awake at night

5. What would happen if the desert had too much rain?

- a) It would become a forest
- b) More cacti would grow
- c) The animals would leave

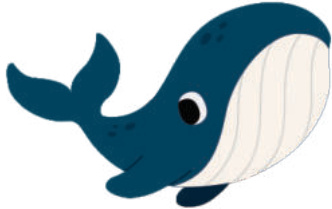

6. Why do birds have feathers?

- a) To help them fly
- b) To help them swim
- c) To keep them cool

Match the animals with their correct habitat.

Forest

Desert

Ocean

Grassland

Classify the animals below into their correct habitat.

Lion

Arctic Wolf

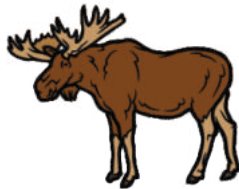

Camel

Sea Horse

Tiger

Moose

Monkey

Shark

Tortoise

Giraffe

Desert	Forest	Ocean	Grassland	Arctic

Create a 3D model of an animal habitat.

ACTIVITY

Instructions:

1. Provide shoe boxes or paper boxes to students.
2. Let them choose a habitat (forest, desert, ocean, etc.)
3. Use paper, clay, leaves, and colors to create a mini 3D model.
4. Place toy or drawn animals inside the diorama.
5. Present and explain why the animals belong in that habitat.
