

UNIT 4

ADVANCED DOCUMENT FORMATTING

Learning Objectives

- Learn to adjust page layout settings like orientation and margins.
- Use built-in styles and themes to create structured and professional-looking documents.
- Organize content by splitting text into columns and adding section breaks.
- Use SmartArt and charts to visually represent ideas and data.

In Grade 5, we explored intermediate MS Word features that helped us organize information more effectively and add a professional touch to our documents. You learned how to create lists with bullets and numbering, organize data using tables, and enhance documents with headers, footers, watermarks, and borders. These skills allowed you to structure information clearly and create visually appealing documents. Now, in Grade 6, we'll move on to advanced formatting tools such as adjusting page layout, using styles and themes, and dividing content into columns. Additionally, we'll explore visual tools like SmartArt and charts to represent ideas and data more creatively.

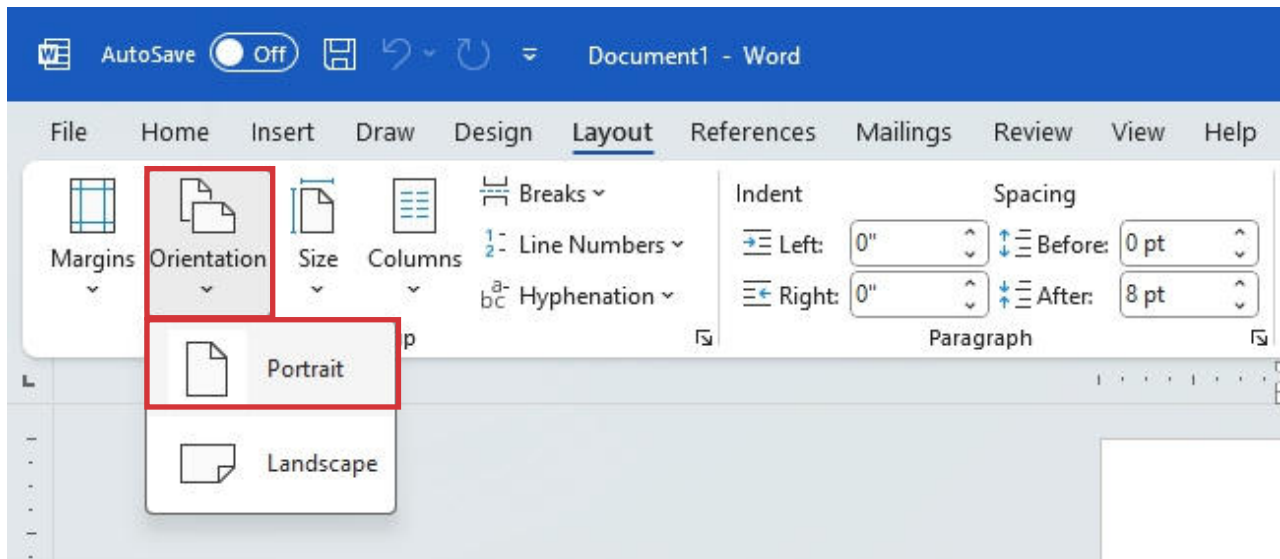

Basic Page Layout

Page layout is important for controlling how your document looks on the page. Adjusting layout options like orientation and margins can help improve readability and create the right look for your document.

1. Adjusting Page Orientation

Page orientation determines whether your document is displayed vertically (Portrait) or horizontally (Landscape).

1. Go to the Layout tab on the Ribbon.
2. Click on Orientation.
3. Choose either Portrait or Landscape based on your needs.

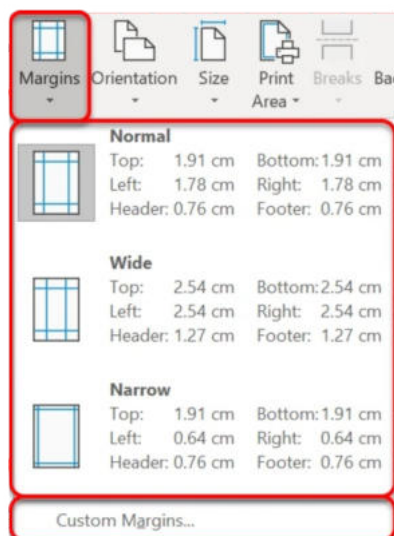

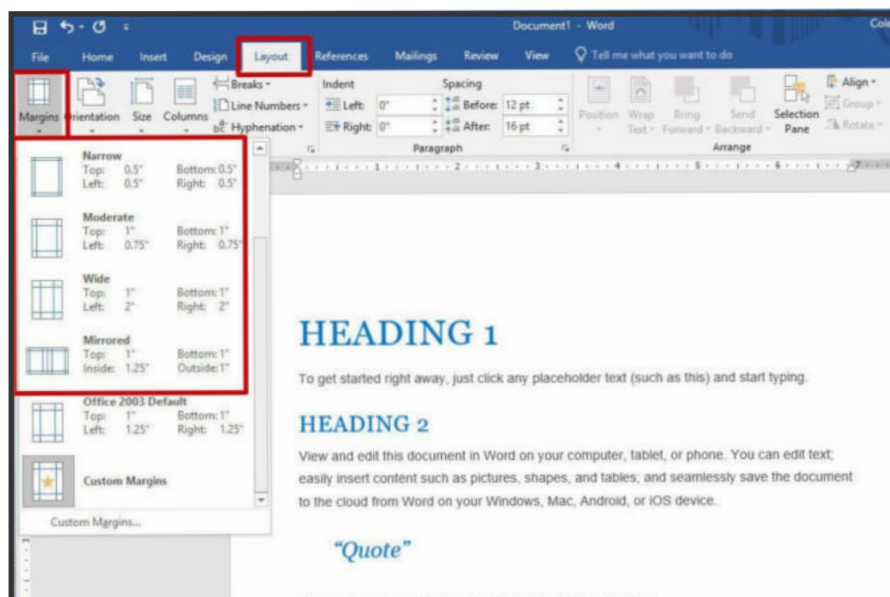

2. Setting Margins

Margins are the blank spaces around the edges of a page.

Adjusting margins can help fit more content on a page or give it a balanced look.

1. Go to the Layout tab.
2. Click on Margins.
3. Select a preset margin or choose Custom Margins to set specific measurements.

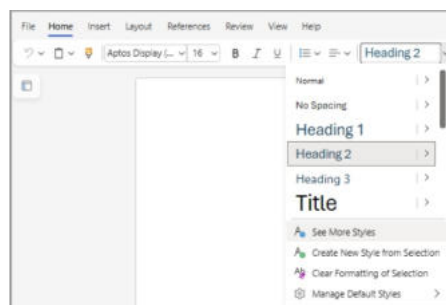

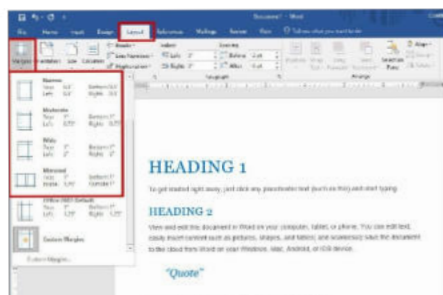

Styles and Themes

Using styles and themes helps give your document a structured and consistent appearance. Styles allow you to format text for titles, headings, and body content, while themes provide a complete set of colours, fonts, and effects.

1. Using Built-in Styles

Styles are pre-set formats that you can apply to different parts of your document to make it organized and visually appealing.

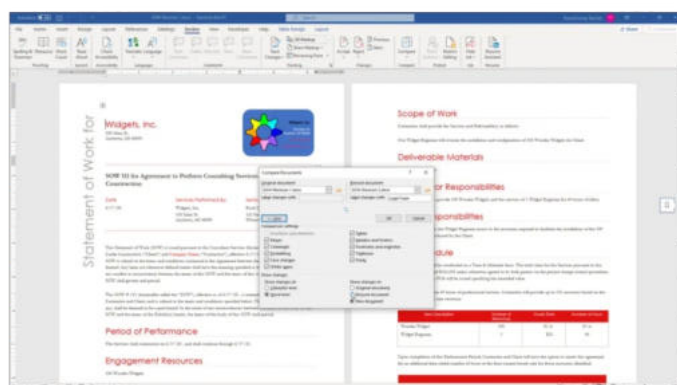

1. Go to the Home tab.
2. In the Styles group, you'll see options like Heading 1, Heading 2, and Normal.
3. Select the text you want to style, then click on a style to apply it.

2. Applying Themes

Themes provide a coordinated set of colours, fonts, and effects to make your document look professional.

1. Go to the Design tab.
2. Click on Themes.
3. Choose a theme from the list, which will apply to your entire document.

Columns and Section Breaks

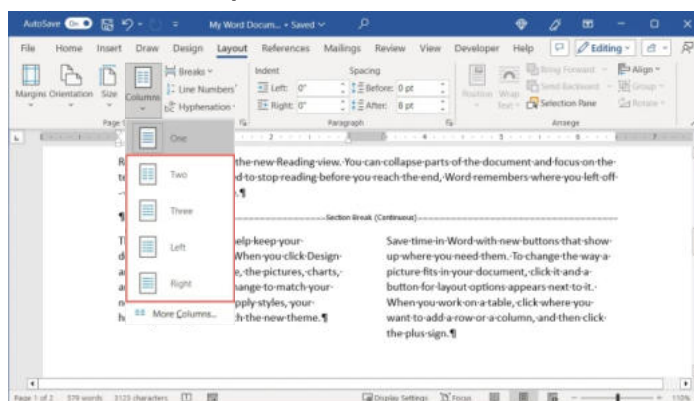

Columns and section breaks help organize content in your document, especially for longer documents or newsletters.

Columns allow text to flow from one side of the page to the other, while section breaks divide content into separate sections with different formats.

1. Splitting Text into Columns

Columns are often used in newsletters, brochures, or reports to make the layout look organized.

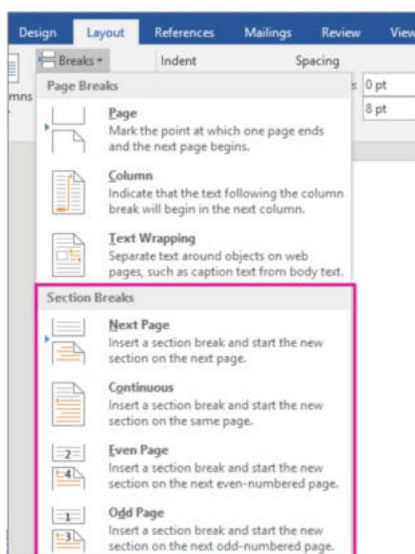

1. Go to the Layout tab.
2. Click on Columns and choose the number of columns you want.
3. You can select options like Two Columns, Three Columns, or More Columns for custom setups.

2. Using Section Breaks

Section breaks allow you to apply different formatting (such as columns, orientation, or margins) to different parts of a document.

1. Go to the Layout tab.
2. Click on Breaks and select Section Break.
3. Choose from options like Next Page or Continuous to create a new section with its own formatting.

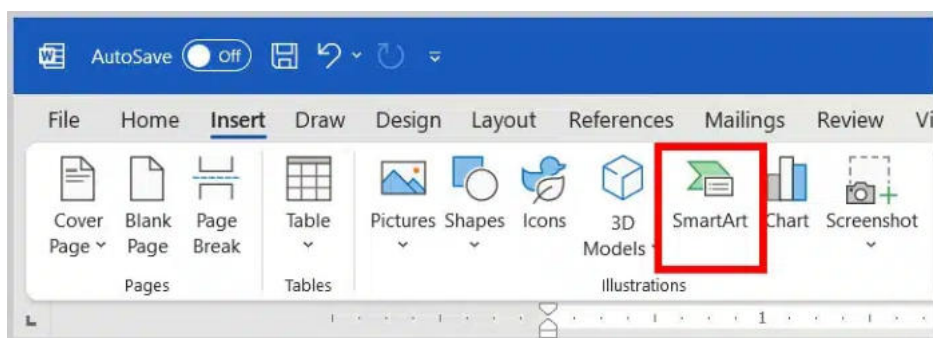

SmartArt and Charts

Visual elements like SmartArt and charts help represent ideas and data in an engaging way. These tools are helpful for creating hierarchies, cycles, and charts that show trends or comparisons.

1. Using SmartArt

SmartArt graphics are pre-designed diagrams that make it easy to create visual representations of information.

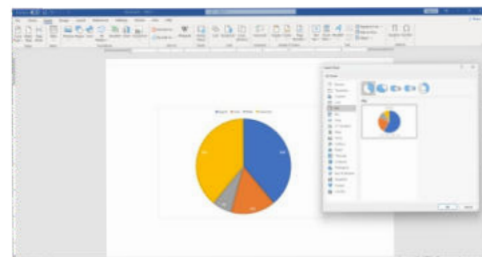

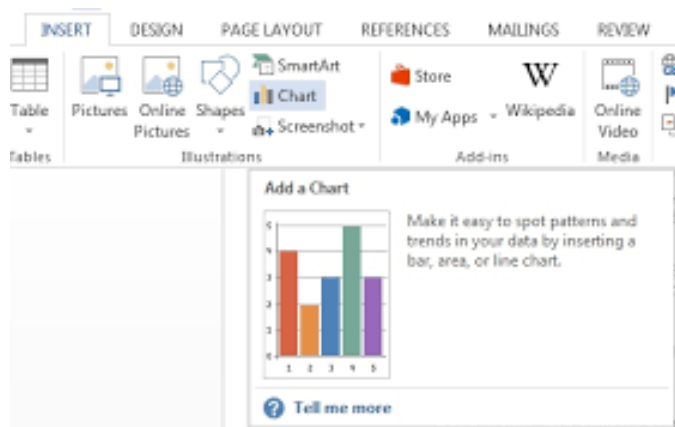

1. Go to the Insert tab.
2. Click on SmartArt.
3. Choose a SmartArt graphic from categories like Hierarchy, Cycle, or Process.
4. Enter your text in the SmartArt graphic to display your ideas visually.

2. Inserting and Formatting Charts

Charts are useful for representing numerical data in an understandable format. You can insert bar charts, line charts, pie charts, and more.

1. Go to the Insert tab.
2. Click on Chart.
3. Select the type of chart you want to use, such as Column, Line, or Pie.
4. Enter your data in the Excel sheet that opens, and the chart will update automatically.

KNOW THIS

MS Word (2016, 2019, 2021, and Microsoft 365) share a similar interface, but newer versions include features like real-time collaboration, improved inking tools, LaTeX support, and AI-powered tools in Microsoft 365.

EXERCISES

01: Choose the correct answer.

1. Which tab allows you to change the orientation of your page?

- a) Home tab
- b) Insert tab
- c) Layout tab
- d) Design tab

2. What is the purpose of a style in MS Word?

- a) To insert images
- b) To apply consistent formatting to text
- c) To adjust page orientation
- d) To add headers and footers

3. Where can you find the option to add columns to your document?

- a) Design tab
- b) Layout tab
- c) Home tab
- d) Insert tab

4. What is SmartArt used for?

- a) Typing text
- b) Representing ideas visually
- c) Changing fonts
- d) Adding headers and footers

5. Which tool would you use to create a visual representation of data?

- a) Styles
- b) Page Borders
- c) Chart
- d) Watermark

6. How can you adjust the margins of a document?

- a) Go to the Insert tab and click on Margins
- b) Go to the Layout tab and click on Margins
- c) Use the Home tab for margin settings
- d) Right-click on the page and select Margins

7. What is the purpose of section breaks in a document?

- a) To adjust page margins
- b) To apply different formatting to parts of the document
- c) To change font styles
- d) To insert images

8. Which tab contains the Themes option to apply a consistent design to your document?

- a) Home tab
- b) Layout tab
- c) Design tab
- d) Insert tab

9. What is the default orientation for a new document in MS Word?

- a) Landscape
- b) Portrait
- c) Narrow
- d) Wide

10. Which feature divides text into multiple columns for newsletters or brochures?

- a) Styles
- b) Columns
- c) Margins
- d) Themes

02: Fill in the blanks.

1. Page orientation can be set to either _____ or _____.
2. To create a consistent look across the document, you can apply a _____ from the Design tab.
3. A _____ break allows different formatting within separate parts of the document.
4. _____ helps you represent hierarchies, cycles, and other ideas visually.
5. The _____ tab contains options for adding themes, page borders, and watermarks.

03: Tick True or False for each statement.

	TRUE	FALSE
Styles help create a structured document with consistent formatting.	☐	☐
Section breaks only allow you to add headers and footers in a document.	☐	☐
SmartArt graphics are useful for representing data trends and comparisons.	☐	☐
Changing the page orientation to Landscape makes the page display horizontally.	☐	☐
Columns are mostly used for short documents with minimal text.	☐	☐

04: Match the terms with their correct definitions.

Column A	Column B
Orientation	a) Provides visual data trends
Style	b) Splits content into sections
Section Break	c) Adjusts page direction
Chart	d) Consistent text formatting
Smart Art	e) Visual representation of ideas

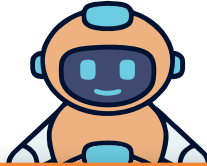

05: Answer the following questions briefly.

1. Name two types of page orientation available in Word.
2. What is the purpose of changing page orientation in a document?
3. Describe how using styles can improve a document's appearance.
4. What is the difference between a column and a section break?
5. What is SmartArt used for in a document?
6. How can you insert a chart into your document?

06: Provide detailed answers for the following questions.

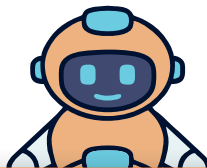

- 1.** Explain the steps to change the page orientation in Word and discuss when to use Portrait or Landscape.
- 2.** What are margins, and how can adjusting them improve the appearance of your document? Describe the steps to set custom margins.
- 3.** How do styles and themes help in maintaining a structured and professional look in a document? Include the steps to apply a theme.
- 4.** Describe the steps to split text into columns and explain the benefits of using columns in a document.
- 5.** What are section breaks, and how can they be used to apply different formatting within a single document?
- 6.** Explain the steps to insert and format a chart in Word. How can charts make data more understandable?

Lab Activity 1: Adjusting Page Layout

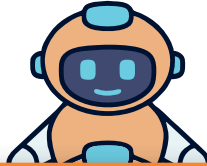

- Change the orientation of your document to Landscape.
- Set custom margins to create more space around the text.

Lab Activity 2: : Using Styles and Themes

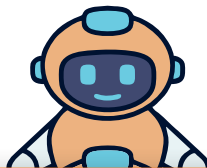

- Type a short article with a title and headings.
- Apply different styles to the title and headings and choose a theme to style the entire document.

Lab Activity 3: Creating Columns and Section Breaks

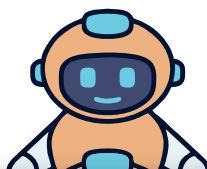

- Split a page into two columns to make it look like a newsletter.
- Add a section break to create a new section with single-column text.

Lab Activity 4: Adding SmartArt and Charts

- Use SmartArt to create a hierarchy diagram (e.g., family tree or organizational chart).
- Insert a chart to represent data (e.g., favourite sports or subjects) and format it to make it visually appealing.

Lab Activity 5: Creating a Professional Document with Adjusted Page Layout

Students will practise adjusting page orientation and margins to make their document look more professional.

Instructions:

1. Open a New Document

Open Microsoft Word and create a new blank document.

2. Change Page Orientation to Landscape

- Go to the Layout tab on the Ribbon.
- Click on Orientation.
- Select Landscape to change the document's orientation to horizontal.

3. Set Custom Margins

- While still in the Layout tab, click on Margins.
- Choose Custom Margins at the bottom of the menu.
- In the dialog box, set the top, bottom, left, and right margins to 1.5 inches (or any custom value you prefer) to give your document more space.
- Click OK to apply the new margins.

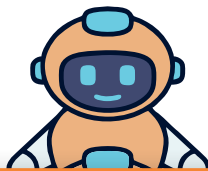

4. Type Your Topic

- Type a topic of your choice (e.g., "The Impact of Climate Change on Agriculture" or "The History of Computers").
- Ensure that the content fills at least two pages.

5. Save Your Document

- Save the document with an appropriate name (e.g., "Adjusted Page Layout").

Lab Activity 6: Formatting a Document with Styles and Themes

Students will apply different styles to their document and choose a theme to maintain consistency and professionalism.

Instructions:

1. Open a New Document

Open Microsoft Word and create a new blank document.

2. Type Your Topic

- Type a topic of your choice (e.g., "Benefits of Exercise" or "The Solar System").
- Include a title, subheadings, and some body text. For example:

- Title: "The Benefits of Exercise"
- Heading 1: "Physical Health Benefits"
- Heading 2: "Mental Health Benefits"
- Body Text: Paragraphs explaining each benefit.

3. Apply a Style to the Title

- Select the title (e.g., "The Benefits of Exercise").
- Go to the Home tab.
- In the Styles group, click on Heading 1 to apply a pre-set style to the title.

4. Apply a Style to the Subheadings

- Select the first subheading (e.g., "Physical Health Benefits").
- In the Styles group, click on Heading 2 to apply a style to the subheading.
- Do the same for any other subheadings (e.g., "Mental Health Benefits").

5. Apply a Theme to the Document

- Go to the Design tab.
- Click on Themes.
- Select a theme that suits your document (e.g., "Office" or "Ion").
- The theme will automatically apply a coordinated set of colours, fonts, and effects to the entire document.

6. Review Your Document

- Ensure that the title and subheadings are properly formatted with the applied styles, and that the entire document follows the selected theme.

7. Save Your Document

- Save the document with a name like "Formatted Document with Styles".
