

UNIT 7

ADVANCED FEATURES OF MS POWERPOINT

Learning Objectives

- Insert and format objects like images, WordArt, audio, and video.
- Apply and customize slide transitions for a smooth presentation flow.
- Use animations to enhance text and objects, including Entrance, Emphasis, Exit, and Motion Path effects.
- Manage and fine-tune animations using the Animation Pane.
- Replicate animation effects using the Animation Painter tool.
- Create professional, engaging presentations by integrating transitions, animations, and media.

PowerPoint is a presentation software program in the Microsoft Office package. It uses a graphical approach to create slide shows that accompany oral delivery of a topic. PowerPoint is widely used in businesses, classrooms, and training sessions because of its simplicity and versatility, providing "**Power to your Point.**"

PowerPoint presentations can also serve as photo albums with music or narrations, making them suitable for distributing on CDs or DVDs. In this chapter, we will explore **advanced features** to enhance your presentations.

Inserting Different Objects in a PowerPoint Slide

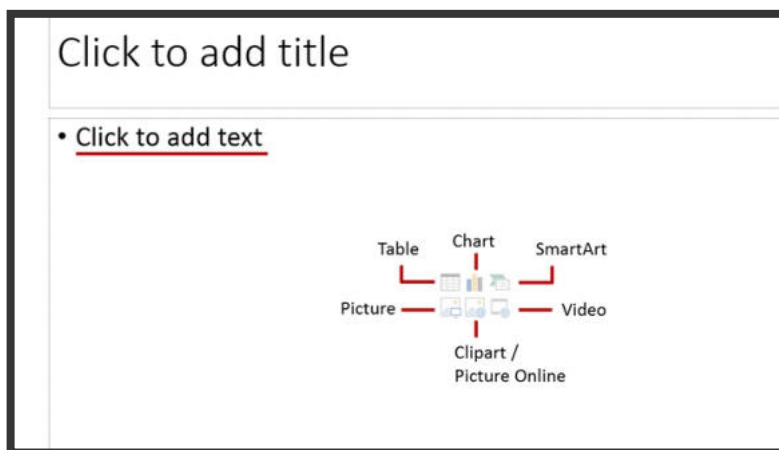

1. Inserting a picture

There are two ways to insert a picture into your slide:

Using Content Placeholder

1. Launch PowerPoint. Most of the time, PowerPoint already has a new slide. Change the layout of this slide to **Title and Content** by selecting the **Home tab | Layout | Title and Content** option. This results in the slide layout you see in the picture.

2. Click on the **Insert Picture from File** button in the Content placeholder, as highlighted in red.

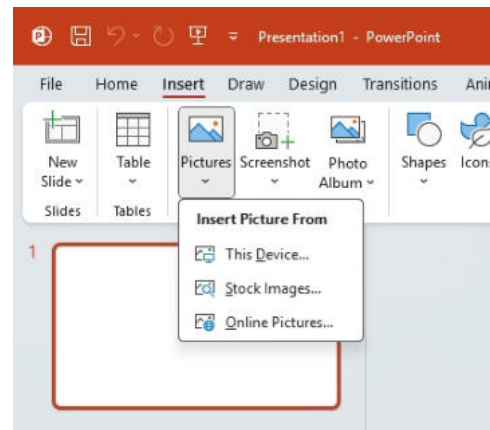

Using Insert Picture Tool

If you want to add a picture on an existing slide that has no Content placeholder, you can select the Insert tab of the Ribbon, and click the Picture button.

PowerPoint lets you add images using three main options:

1. This Device
2. Stock Images
3. Online Pictures

1. This Device

- Insert pictures from your computer.
- Use for personal or saved images.

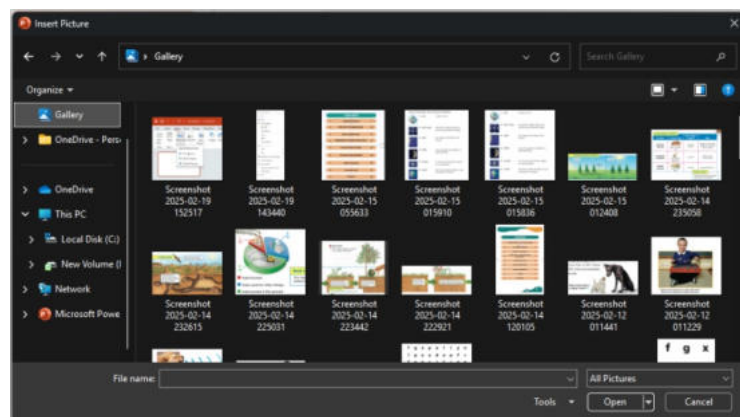

2. Stock Images

- Choose from free high-quality images provided by Microsoft.
- Great for professional or themed visuals.

3. Online Pictures

- Search and insert images from the internet (via Bing or OneDrive).
- Useful for quick access to web images.

Either way, you will open the Insert Picture dialog box. Navigate to the folder where your pictures are located. You will see the icons or thumbnails of the pictures, as shown in the following image. Select the picture you need, and click on the Insert button highlighted in red.

As soon as you click the Insert button, you will see the selected picture placed on the PowerPoint slide.

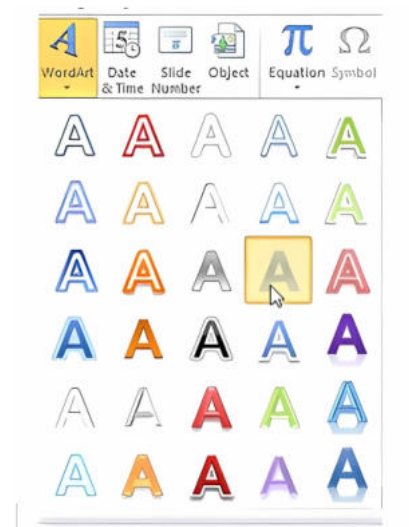

Now, the picture can be edited by resizing, moving, rotating, etc.

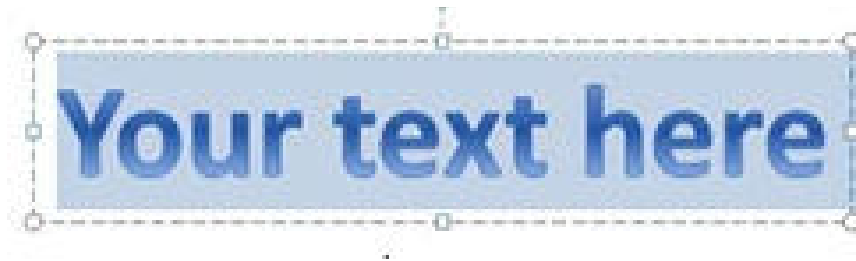

2. Inserting Word Art

Word Art offers additional effects like outline text, fill, gradient, 3D effects, and shadows, etc. If you want to, you can add WordArt using the Word Art command on the Insert tab in the Text group.

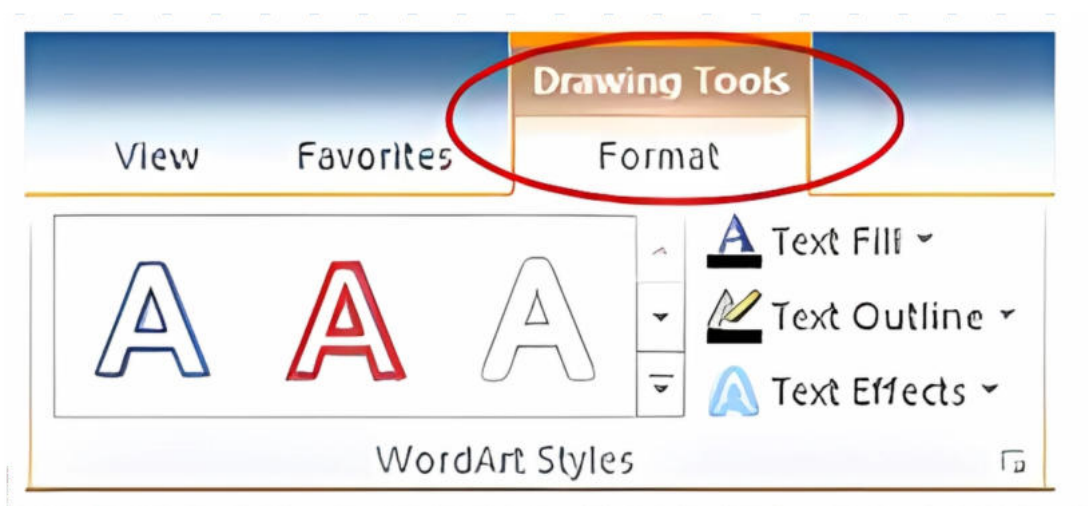

1. On the Insert tab, in the Text group, click WordArt. The WordArt Styles gallery opens.

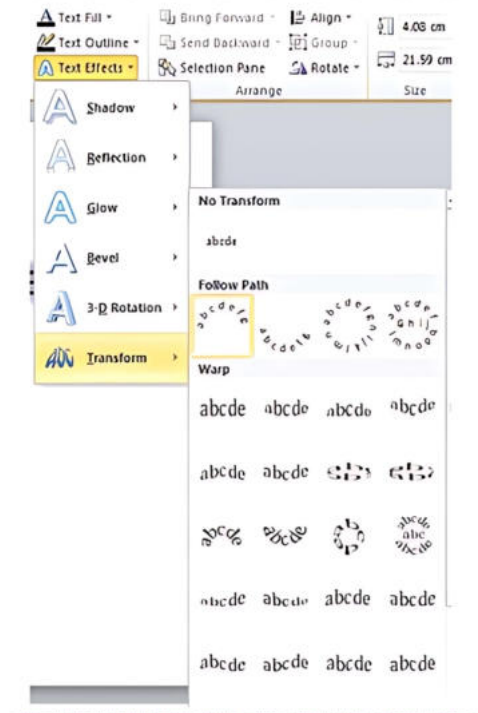

1. Click on the style you want to insert, and a text box appears with the text “Your text here”, with the WordArt style you selected applied to it.

1. Edit the text to whatever you want it to be.
At this point, you'll see a Drawing Tools Format context tab. Here you'll find the WordArt Styles group.

This contains the **Preset styles gallery** and dropdowns for controlling the **Text Fill, Text Outline, and (most fun) Text Effects**.

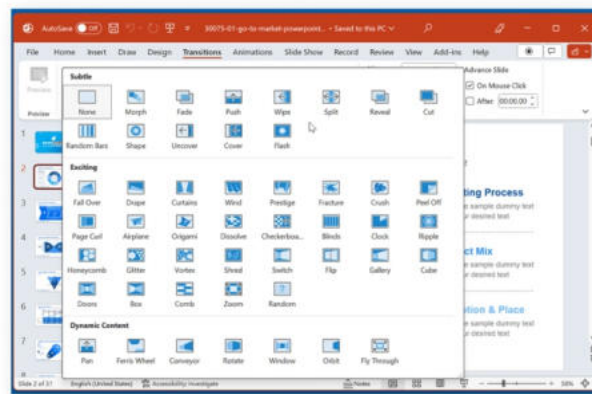

As you can see, there are a lot of possibilities to explore.

MUHAMMAD BILAL

Adding Slide Transitions

Transitions between slides cover much more than some movement between one slide and the next. Slide transitions in PowerPoint offer many options, including timings and sounds. In either the Slide Sorter or Normal view, select the slide or slides to which you want to apply the transition. Now, let's do it practically.

1. From the menu ribbon, select the Transitions tab.

2. The most commonly used animations will appear in the centre. To preview more transition options, click the down arrow.
3. Select a transition from the list. Clicking it will apply the transition to the slide. You can also select Apply to All to apply the same transition to all your slides.
4. In the Duration option, enter the speed at which you want the transition to play.
5. In the Sound field, use the drop-down menu to select a sound to play during a slide transition, if desired.
6. Indicate how you want the slide transition to occur by selecting an option under the Advance Slide heading. Select On mouse Click if you want the transition to take place when you click the left mouse button. Select Automatically After if you want the transition to occur after a specified time. Use the up and down arrow keys in the blank box to specify the number of seconds which should pass before the transition takes place.

Custom Animation with Text

In PowerPoint, you can animate text and objects such as clip art, shapes, and pictures. Animation or movement on the slide can be used to draw the audience's attention to specific content or to make the slide easier to read.

Types of Animations

There are many different animation effects you can choose from, and they are organized into four types:

•**Entrance:** These control how the object enters the slide. For example, with the Bounce animation, the object will drop onto the slide and then bounce several times.

Examples: Appear, Fade, Fly In, Float In, Split, Wipe.

•**Emphasis:** These animations occur while the object is on the slide and are often triggered by a mouse click. For example, you can set an object to Spin when you click the mouse.

Examples: Pulse, Color Pulse, Teeter, Spin, Grow/Shrink, Desaturate.

•**Exit:** These control how the object exits the slide. For example, with the Fade animation, the object will simply fade away.

Examples: Shape, Wheel, Random Bars, Shrink & Turn, Zoom, Swivel.

•**Motion Paths:** These are similar to Emphasis effects, except the object moves within the slide along a predetermined path, like the circle.

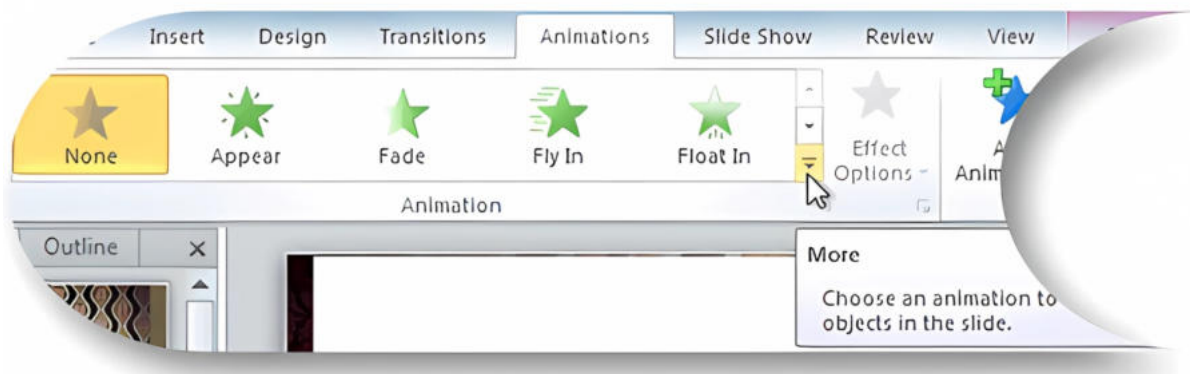

Examples: Lines, Arcs, Turns, Shapes, Loops, Custom Path.

How to Apply Animation to Text

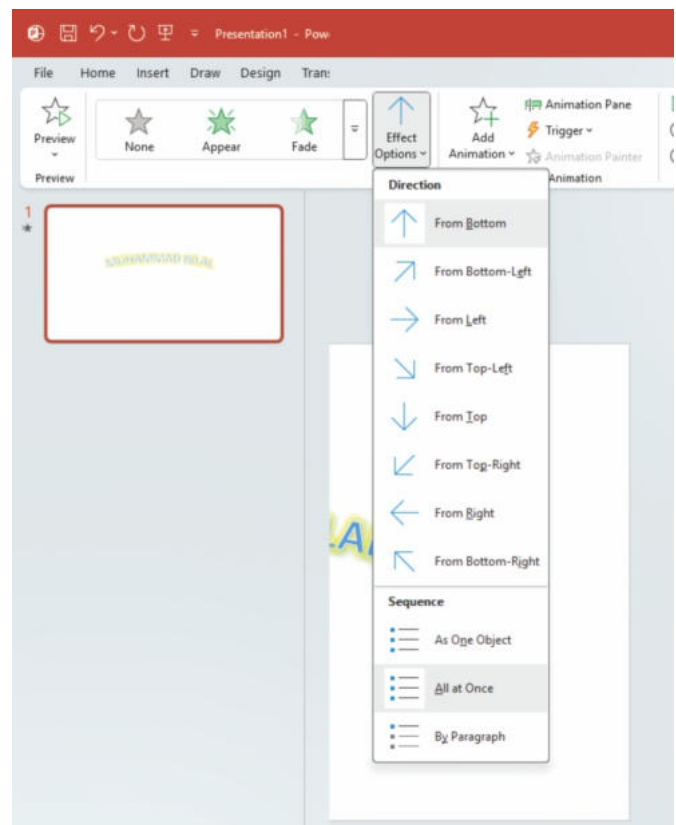

1. Select the text.
2. Click the Animations tab.
3. In the Animation group, click the More drop-down arrow to view the available animations.
4. Select the desired animation effect.

Examples: Appear, Fade, Fly In, Float In, Split.

5. The text will now have a small number next to it to show that it has an animation. Also, in the Slide pane, the slide will now have a star symbol next to it.

Some effects will have options you can change. For example, with the Fly In effect, you can control which direction the object comes from. These options can be accessed from the Effect Options command in the Animation group.

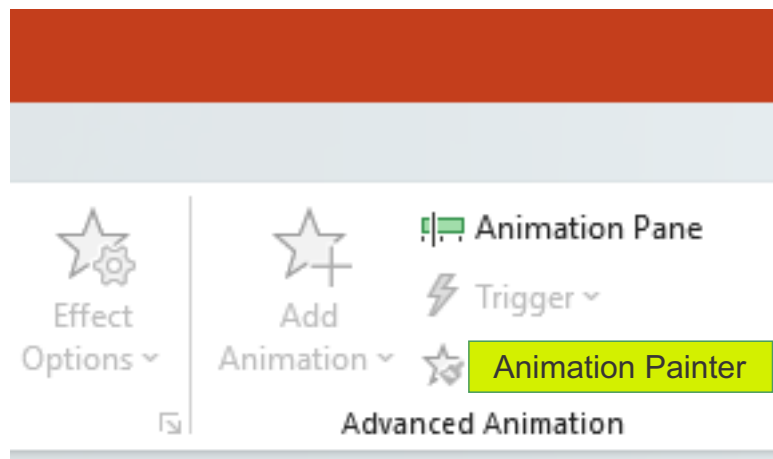

You can apply more than one animation effect to a text.

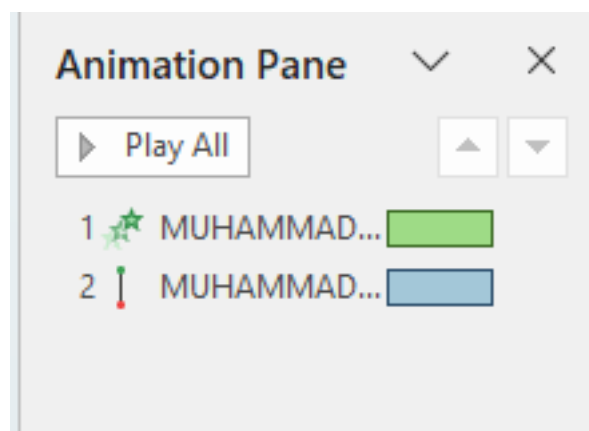

Animation Painter:

Sometimes you may want to apply the same effects to more than one object. You can do this by copying the effects from one object to another using the Animation Painter.

1. Click the object that has the effects you want to copy.
2. From the Animations tab, click the Animation Painter command.

3. Click the object you want to copy the effects to. The effects will be applied to the object.

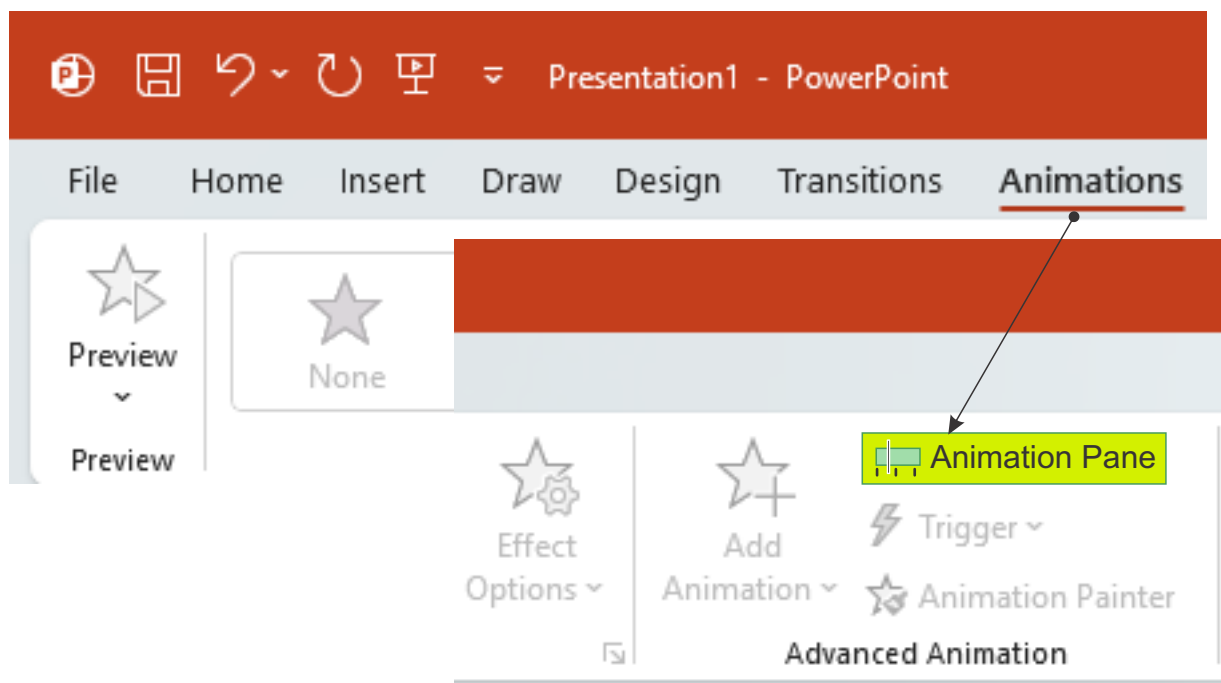

Both objects now have the same effects.

Animation Pane:

The **Animation Pane** allows you to view and manage all of the effects that are on the current slide. You can modify and reorder effects directly from the Animation Pane, which is especially useful when you have several effects.

To open the Animation Pane:

1. From the **Animations tab**, click the **Animation Pane** command.

2. The Animation Pane will open on the right side of the window. It will show all of the effects for the current slide in the order they will appear.

To reorder effects from the Animation pane:

1. On the **Animation pane**, click and drag an effect up or down.
2. The effects will reorder.

To preview effects from the Animation pane:

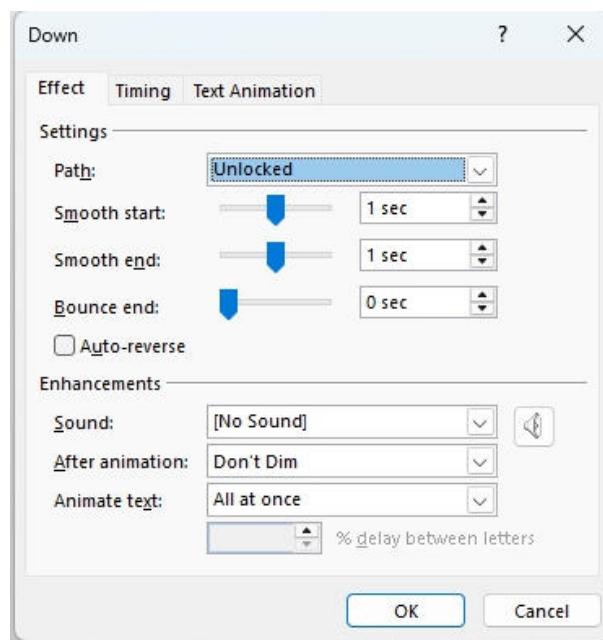

1. From the **Animation pane**, click the **Play** button.
2. The effects for the current slide will play. On the right side of the Animation pane, you will be able to see a timeline that shows the progress through each effect.

The Effect Options Dialog Box

From the **Animation pane**, you can access the **Effect Options dialog box**, which contains more advanced options you can use to fine-tune your animations.

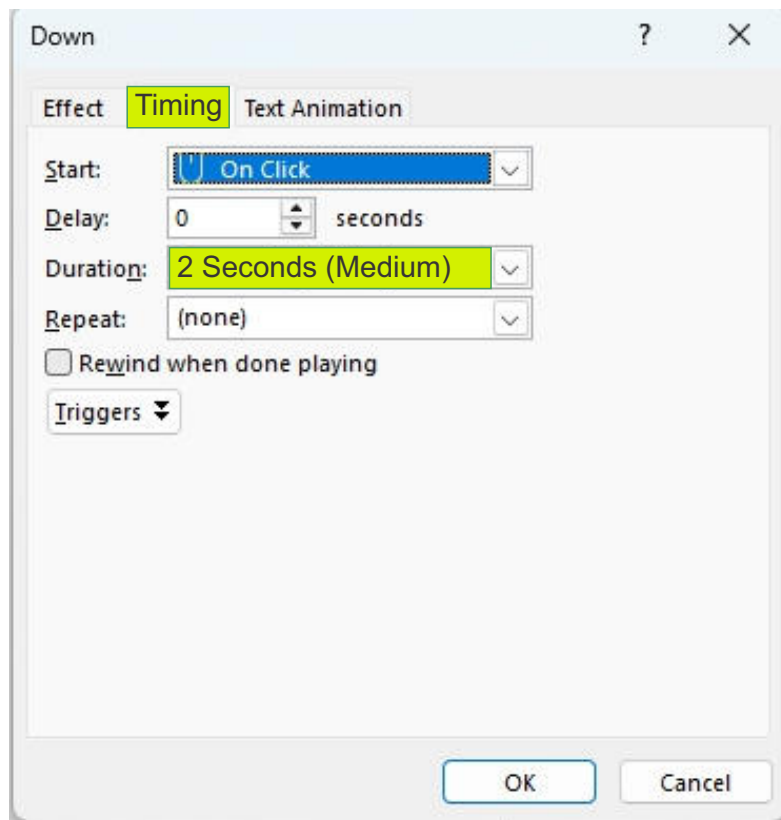

To open the Effect Options dialog box:

1. From the **Animation pane**, select an effect. A drop-down arrow will appear next to the effect.
2. Click the drop-down arrow and select **Effect Options**. The Effect Options dialog box will appear.
3. From here, you can add various enhancements to the effect:
 - **Sound:** This adds a sound effect to the animation.
 - **After animation:** This changes the color after the animation is over.
 - **Animate text:** If you are animating text, you can choose to animate it all at once, one word at a time, or one letter at a time.

To change the effect timing:

1. From the Effect Options dialog box, select the Timing tab.
2. From here, you can add a delay before the effect starts, change the duration of the effect, and control whether the effect repeats.

KNOW THIS

MS PowerPoint (2016, 2019, 2021, and Microsoft 365) retain a familiar interface while evolving with features like Morph transitions, 3D models, Ink Replay animations, and AI-powered slide design suggestions in Microsoft 365.

EXERCISES

01: Choose the correct answer.

1. Which tab is used to add a picture to a PowerPoint slide?

- (a) Home tab
- (b) Insert tab
- (c) Design tab
- (d) Animations tab

2. What does the Animation Painter tool do?

- (a) Adds new animations to text
- (b) Copies animation effects from one object to another
- (c) Deletes animation effects
- (d) Changes the colour of animations

3. Which type of animation is used to make an object leave the slide?

- (a) Entrance
- (b) Emphasis
- (c) Exit
- (d) Motion Paths

4. How can you preview a transition applied to a slide?

- (a) Click the Apply button
- (b) Click the Play button under the Transitions tab
- (c) Open the Slide Sorter
- (d) Use the Animation Pane

5. Which animation effect makes an object bounce onto a slide?

- (a) Fade
- (b) Float In
- (c) Swivel
- (d) Bounce

6.What does the "Duration" option under Slide Transitions control?

- (a) When the transition starts
- (b) The speed of the transition
- (c) The sound during the transition
- (d) The animation style

7.Where can you manage and reorder all animation effects on a slide?

- (a) Slide Sorter
- (b) Transition Tab
- (c) Animation Pane
- (d) Effect Options

8.Which feature allows you to add text with artistic effects like shadows and gradients?

- (a) Clipart
- (b) WordArt
- (c) Animation Pane
- (d) Text Box

9.What does the "Effect Options" command allow you to do?

- (a) Adjust slide timings
- (b) Customize animation directions or settings
- (c) Reorder animations
- (d) Apply transitions

10.Which key is used to start a slideshow in PowerPoint?

- (a) Ctrl + S
- (b) F5
- (c) Alt + Tab
- (d) Shift + F7

02: Fill in the blanks.

1. _____ is the term used when you press and hold the left mouse key and move the mouse around the slide.
2. The entry effect as one slide replaces another in a show is called _____.
3. _____ is a feature that automatically places clipart in your presentation.
4. _____ key can be used to view Slide show.
5. We can copy the effects from one object to another using _____.
6. The _____ tab is used to apply animations to objects in a PowerPoint slide.
7. The _____ tool is used to copy animation effects from one object to another.
8. To add artistic text effects like shadows and gradients, you use _____.
9. The _____ key is used to start a slideshow in Power Point.
10. The _____ pane allows you to manage and reorder all animations on a slide.
11. Transitions between slides can be customized using options like _____ and _____.

03: Tick True or False for each statement.

	TRUE	FALSE
Motion Paths animations control how an object leaves the slide.	☐	☐
WordArt allows you to add artistic effects to text in PowerPoint.	☐	☐
Slide Transitions are applied to individual elements, not entire slides	☐	☐
The Animation Pane is used to preview transitions on slides.	☐	☐
The "Duration" option in Slide Transitions controls the speed of the transition.	☐	☐
You can apply multiple animations to a single object in PowerPoint	☐	☐

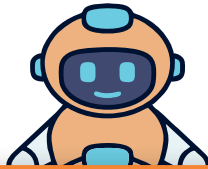

04: Answer the following questions briefly.

1. What is the difference between Slide Transitions and Animations?
2. How can you reorder animation effects on a slide?
3. What is the purpose of the Animation Painter tool?
4. Which animation type controls how an object enters a slide?
5. What does the "Effect Options" command allow you to customize in animations?
6. Explain the steps to insert a picture using the Insert tab in PowerPoint.

05: Provide detailed answers for the following questions.

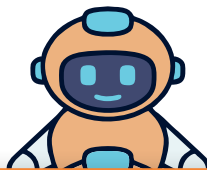

1. Describe the different types of animations in PowerPoint and give examples of each.
2. Explain how to apply a slide transition to all slides and customize its duration and sound.
3. What is the Animation Pane, and how can it be used to manage and reorder animations?
4. Discuss the steps to insert and format WordArt in a PowerPoint slide, including customizing Text Effects.

Lab Activity 1: Create a Presentation on "The Solar System"

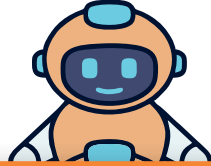

- a. Include animations for planets and transitions between slides.
- b. Add WordArt for slide headings and insert at least one image.

Lab Activity 2: Create a Presentation on "Input and Output devices of Computer System"

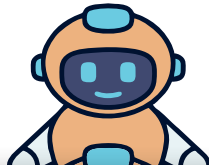

- a. Include pictures of input and output devices.
- b. Add WordArt for slide headings.

Lab Activity 3: Design a Presentation on "My Dream Job"

- a.** Add animations to text and images.
- b.** Use Slide Transitions with sounds and customize the duration.

Lab Activity 4: Create a Storyboard Presentation

- a.** Use Motion Path animations to show the movement of characters or objects in the story.
- b.** Add background music and transitions to the slides.
