

UNIT 3

VITAL AID: EMERGENCY CARE UNIT

Learning objectives:

- Identify common causes of fire accidents and understand how to prevent them in daily life.
- Learn the types of fire extinguishers and their appropriate usage for different types of fires.
- Understand the steps to provide first aid for burns and fire-related injuries, including minor and major burns.

Introduction to First Aid

First aid is the immediate help given to someone who is hurt or sick before a doctor arrives. It can save lives and prevent injuries from getting worse.

First Aid for Common Injuries

A. Cuts and Wounds

- Wash your hands before touching the wound.
- Clean the wound with clean water.
- Cover it with a bandage.

B. Burns

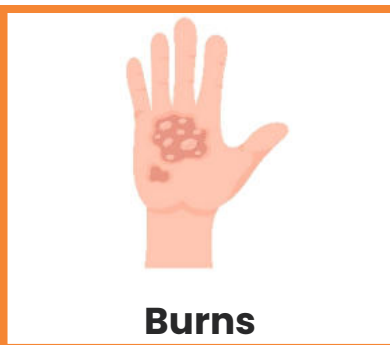

- Cool the burn under running water for 10 minutes.
- Do not apply ice or ointment.
- Cover with a clean cloth.

C. Nosebleeds

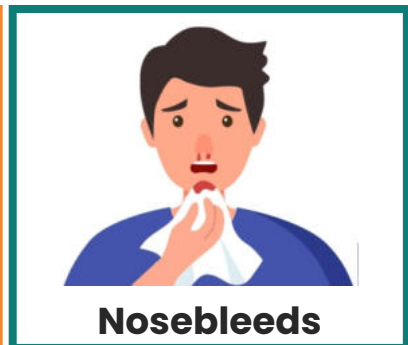

- Sit up straight and lean forward.
- Pinch the nose for 10 minutes.
- Do not tilt the head backward.

Cuts and Wounds

Burns

Nosebleeds

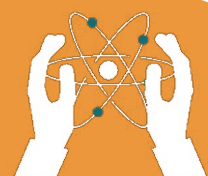

Causes of Fire Accidents

Fire is useful in daily life for cooking, heating, and more, but it can be dangerous and cause accidents. Some common causes of fire accidents include:

• DID YOU KNOW?

Burns caused by hot liquids like tea or soup are called scalds and can be just as serious as burns caused by fire.

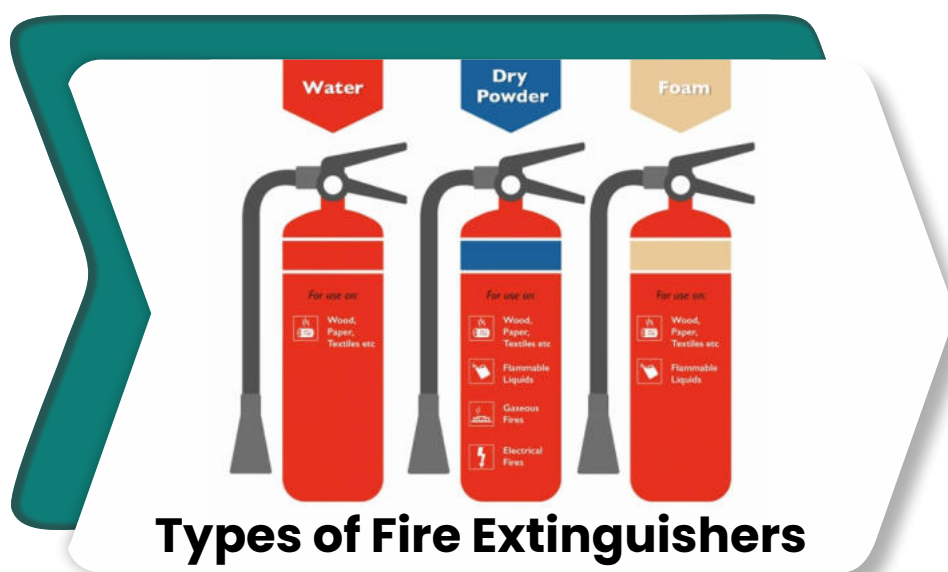

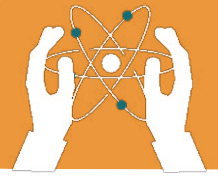

- **Electrical appliances:** Faulty wires, irons, and electric sockets.
- **Cooking:** Unattended stoves or open flames.
- **Chemicals:** Certain chemicals and acids can cause burns if they come in contact with the skin.
- **Hot Liquids:** Spilling hot water, oil, or tea can cause burns on the skin.

Types of Fire Extinguishers

Fire extinguishers help to put out fires. They are of different types depending on the kind of fire:

- **Fire Blanket:** It is used for smothering flames on people or small fires.
- **Dry Sand:** It is used for putting out fires on the ground.
- **Water:** It is suitable for fires involving paper, wood, or cloth.
- **Carbon Dioxide (CO₂) Cylinder:** It is effective for electrical fires.
- **Foam Cylinder:** It is used for fires involving flammable liquids.

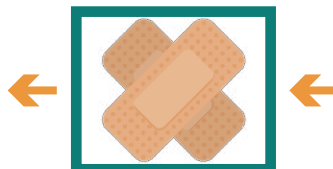

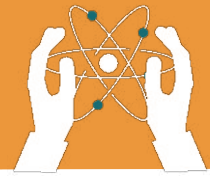

First Aid for a Fire Victim

Steps to Help a Fire Victim:

- **Remove from Heat Source:** Move the person away from the source of the fire to prevent further burns.
- **Take to Fresh Air:** Make sure the victim is in a cool, open area where they can breathe easily.
- **Extinguish Burning Clothes:** If clothes are still burning, use a fire blanket or water (only if it's safe) to extinguish the flames.
- **Check for Breathing:** Ensure the person is breathing; if not, perform mouth-to-mouth resuscitation.
- **Seek Medical Help:** Call for emergency assistance immediately.

First Aid for Different Types of Burns

1. Minor Burns:

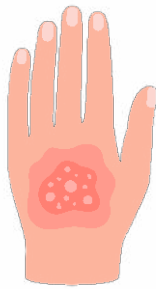

- Cool the burn with running water for about 10 minutes.
- Cover with a sterile, non-stick bandage.
- Avoid breaking any blisters.

2. Major Burns:

- Move the person away from the heat source.
- Cover the burn with a clean cloth or sterile bandage.
- Check breathing, perform mouth-to-mouth resuscitation if necessary.
- Seek immediate medical help.

3. Burns from Hot Liquids:

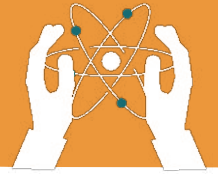

- Gently remove clothing if it's not sticking to the skin.
- Cool the area with water for about 10 minutes.
- Do not break any blisters and take the person to a hospital.

Minor Burn

Major Burn

Steps to Follow in an Emergency

If someone is injured:

1. Stay calm – Do not panic.
2. Check the injury – Look at what happened.
3. Call for help – Inform an adult or dial emergency services.
4. Give First Aid – Help as much as you can.

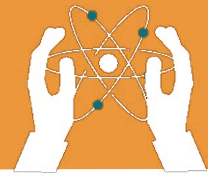

Safety Rules to Prevent Accidents

- Do not play with sharp objects.
- Be careful while using electrical items.
- Walk, don't run, in crowded places.
- Wear safety gear while playing sports.

Critical Thinking

- Imagine you are alone at home and your younger sibling accidentally swallows a small toy. What should you do first?
- Why is it unsafe to put water on a fire caused by oil or grease? What might happen if you do?

Activity:

1. Make a list of safety rules for home, school, and playground.
2. Perform a skit showing how to prevent an accident.

Fill the blanks with the help of given words in the box.

CO₂

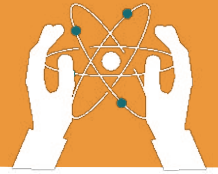

Thermal burns

running

hospital

blanket

1. Burns caused by dry heat, like fire, are called _____.
2. _____ is used to put out electrical fires.
3. Minor burns should be cooled with _____ water for about 10 minutes.
4. First aid for major burns involves taking the person to a _____ immediately.
5. If clothes are still burning, use a _____ to put out the fire.

Write "T" for True or "F" for False.

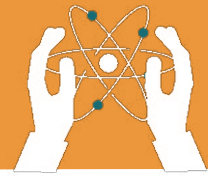

1. Water should always be used to put out all types of fires.

2. A fire blanket can be used to smother flames on a person.

3. Ice should be applied to minor burns to cool them down.

4. The first step in helping a fire victim is to remove them from the heat source.

5. Blisters from burns should be popped to relieve pain.

Choose the correct answer.

1. When someone's clothing catches fire, what should they do?

- Run around
 - Stand still
 - Stop, drop, and roll
 - Sprinkle water lightly
-

2. If a burn blister forms, what should you avoid doing?

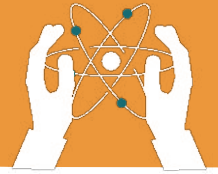

- Keep it clean
 - Cover with a sterile bandage
 - Pop it
 - Apply an antibiotic
-

3. Which type of burn requires immediate medical attention?

- Sunburn
 - First-degree burn
 - Minor kitchen burn
 - Third-degree burn
-

4. What is the primary purpose of a first aid kit?

- Treat major injuries
 - Provide immediate care before medical help arrives
 - Diagnose illnesses
 - Replace the need for a doctor
-

Match the Column.

COLUMN A

Fire Blanket

Running Water

**Carbon Dioxide
(CO₂) Cylinder**

Sand

Foam Cylinder

COLUMN B

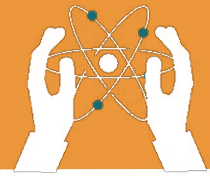

Electrical fires

Smothers flames
on clothes

Used on minor burns

Used for ground fires

Flammable liquid fires

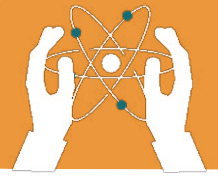

Answer the Following Questions:

Short-Answer Questions

- Q1. Mention at least five ways to prevent fire accidents.
- Q2. Describe first aid for cuts and wounds.
- Q3. What is the function of a foam cylinder in fire extinguishing?
- Q4. When should you seek medical help for a burn?

Long-Answer Questions

- Q1. Describe the steps for providing first aid to a fire victim.
What should you do to ensure their safety and comfort?
- Q2. Explain the different types of fire extinguishers and when to use each one. Why is it important to have the right type of extinguisher?

Give reasons for the following

1. Why should a fire caused by electricity never be put out with water?

Ans: _____

2. What makes a CO₂ cylinder a good choice for electrical fires?

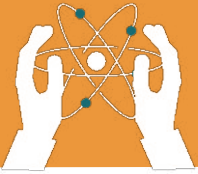

Ans: _____

3. Why is it important to keep hot liquids away from the edge of tables or counters?

Ans: _____

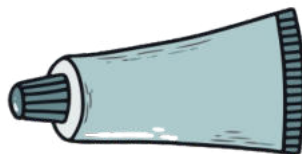

4. Why should you avoid using ice on a burn?

Ans: _____

VITAL AID: EMERGENCY CARE UNIT

Drag and drop the correct names of the given pictures in the given blank boxes to prepare your first aid box from the given help box at the bottom of the page.

Thermometer
Medicines
Sanitizer

Antiseptic Lotion
Tweezers
Antiseptic Cream

Gloves
Band-aid
Scissors
