COMPREHENSIONS

UNIT 5 COMPREHENSIONS

SHAH ABDUL LATIF

Islam is the religion of peace. God sent the Prophet (peace be upon him) as a blessing to mankind. He won people's hearts by his kind nature and gentle ways. His noble example was followed by many of his followers, in all ages, all over the world. It was through the efforts of these saintly men that Islam spread far and wide. These holy men were extremely successful in bringing non-Muslims to the fold of Islam.

In every part of our country, there are shrines of such saints. In Lahore, are the shrines of Data Ganj Bukhsh and Mian Mir Sahib. In Pak Pattan lived and died Baba Fareed. In Multan, is the shrine of Ghaus Bahaul Haq. In Peshawar, in Quetta, and in countless other towns and cities, there are the tombs of these men of God. In Sindh are the tombs of two great saints, Shah Abdul Latif and Qalandar Lal Shahbaz.

The great saint Shah Abdul Latif, who is lovingly called Lal Latif by his devotees,

was born in 1102 Hijra in a small village called "Hala Haveli". The good Mughal Emperor Aurangzeb then ruled the country. Shah Abdul Latif's ancestors migrated to Sindh during the days of Tamerlane. Sindh was then a centre of Muslim culture, and Shah Abdul Latif's ancestors liked it so much that they decided to make it their home. But no one would have remembered their names or learned about them if many centuries later, one of their descendants, Sayed Habib Shah, had not been blessed with a son who grew up to be the saint Lal Latif.

Shah Latif had a very sensitive mind. His heart was soon filled with the love of God. The beauty of nature aroused his feelings strongly. While he was only a boy, he started composing poetry. He was also keen on acquiring knowledge, and he grew up to be a scholar of Arabic and Persian. When he was twenty, he married a noble and good lady. He showed great kindness to his wife and lived at home for many years. His heart, however, turned more and more towards religion and devotion, and he felt restless in living a normal domestic life.

When his father died, Shah Latif left his home and went to live on a mound at some distance from his village. A mound of sand is called "Bhit" in Sindhi. Due to the fact that he lived on this mound for the rest of his life, Shah Latif came to

be known as "the Saint of Bhit". To this day, he is famous all over the country as Shah Abdul Latif Bhitai or Shah Latif of the Mound.

As days passed, Latif's love of God grew more and more, until he found pleasure only in devotion and spent most of his time in prayer and deep thinking. His spiritual power grew stronger with prayer and devotion, so much so that people began to be attracted towards him. Anyone who came to him was strongly impressed by his gentle ways, and his followers increased day by day. Close to the mound on which Lal Latif came to live is a natural lake. His poetic nature loved the calm atmosphere. He would spend much of his time sitting on the bank of this lake. As he sat there, he prayed to God and sometimes composed verses in His praise.

Shah Latif was not only a saint and a poet but also a musician. He found great comfort in music. His skill in this art enabled him to make many improvements and changes in the difficult music of his time. As in everything else, he loved simplicity in music and musical instruments. He did not agree with the idea that music should be difficult. So he made it simple. He also invented a simple musical instrument and called it "Tambooro". It was like an instrument used by the Arabs, but the number of strings was different. To this day, the "Tambooro" is popular all over Sindh. Old and young play it and sing the songs of Latif to its simple but moving tunes.

Lal Latif died in 1165 Hijra on the Mound where he had lived and was buried there. A famous king of Sindh, Ghulam Shah Kalhoro, was so devoted to him that he built a shrine over his grave. Latif's devotees collected his poetry, and this collection came to be called the Risalo of Shah Abdul Latif. He was a poet of the people, so he wrote poetry in the language of the common man. This collection of his poems is so valued that it has been translated into many languages. One great quality of Latif's poetry, besides its simplicity, is its moving music. When you listen to it, even if you do not understand a word of it, you will be moved by its melody.

Latif's URS is held at his shrine every year on 14th Safar, the second month of the Muslim calendar. Many thousands of people gather, listen to the Saint's songs sung on the "Tambooro," and offer their prayers. Many learned men read papers that tell about Latif's life and his poetry. Recently, a library, a rest house, and a museum have been built. The shrine itself has been rebuilt and connected with the main road. Its lovely white dome, representing the purity and dignity of Latif, can be seen from many kilometers away.

Latif's message is the message of love. He believed in the brotherhood and equality of men and in pleasing God by good deeds. This, according to him, is the goal of life.

Vocabulary

1. Study the following words and meaning carefully and use them in your sentences.

S. No.	Words	Meanings
1.	ancestors	Someone from whom you are descended (but usually more remote than a grandparent)
2.	migrate	Move from one country or region to another and settle there
3.	sensitive	Responsive to physical stimuli
4.	normal	Being usual, typical, or standard; not abnormal
5.	buried	Placed in a grave
6.	dignity	The quality of being worthy of esteem or respect
7.	shrine	A place of worship hallowed by association with some sacred thing or person

Answer the following questions in your notebook.

1. How was information about Shah Latif's early life collected? Why was it collected in this manner?
2. Why is Shah Latif called the 'Saint of Bhit'?
3. Why did people become Shah Latif's followers?
4. What does Shah Latif's poetry and work tell us about his knowledge and skills?
5. Why is Shah Latif's key message in his verses acceptable to everyone?
6. Can we put his message into practice in today's world? If 'Yes' how, if 'No' why not?

RURAL AND URBAN LIFE

Life in rural areas and urban areas differs greatly in terms of lifestyle, facilities, and opportunities. While rural life offers a peaceful environment and strong community bonds, urban life provides modern conveniences and career growth. Both have their own advantages and challenges, making them unique in their own ways.

Similarities Between Rural and Urban Life

Although rural and urban areas are quite different, they share some common aspects:

Both provide shelter and a place to live – Whether in a village or a city, people need homes and communities to feel secure.

Both contribute to the economy – Rural areas focus on agriculture and farming, while urban areas rely on industries and businesses to boost economic growth.

Both require basic necessities – People in both areas depend on food, water, education, healthcare, and transportation.

Both have schools and hospitals – Education and medical facilities are present in both rural and urban areas, though their availability and quality may differ.

Differences Between Rural and Urban Life

Aspect	Rural Life	Urban Life
Environment	Fresh air, greenery, and open spaces.	Pollution, traffic, and limited green areas.
Lifestyle	Slow and peaceful, strong sense of community.	Fast-paced, competitive, and more individualistic.
Housing	Large houses with open spaces and farms.	Apartments and small houses with limited space.
Education	Fewer schools, sometimes lower quality.	More schools, colleges, and universities with better facilities.
Employment	Mainly agriculture and livestock farming.	Wide variety of jobs in industries, IT, and businesses.

Healthcare	Limited medical facilities, fewer specialized doctors.	Advanced hospitals, specialized medical care, and better health services.
Transportation	Fewer roads, public transport is rare.	Well-developed roads, buses, trains, and taxis.
Cost of Living	Lower cost of living, self-sufficiency in food.	Higher cost of living due to expensive housing, transport, and utilities.

Which One is Better?

Both rural and urban life have their own benefits and challenges.

- Rural life is better for those who enjoy peace, nature, and a strong community bond. It is suitable for those who prefer a simple lifestyle and less pollution.

- Urban life is ideal for people who seek career opportunities, modern education, and better healthcare. It provides more entertainment, better infrastructure, and a faster lifestyle.

Ultimately, the best choice depends on a person's preferences, career goals, and lifestyle needs.

S. No.	Words	Meanings
1.	Contrast	The differences between two things
2.	Similarity	A common feature or resemblance
3.	Agriculture	The practice of farming and growing crops
4.	Livestock	Farm animals such as cows, goats, and sheep
5.	Infrastructure	The basic facilities like roads, schools, and hospitals
6.	Industry	Factories and businesses that produce goods
7.	Pollution	The presence of harmful substances in the environment
8.	Community	A group of people living together in one place
9.	Economy	The system of trade, businesses, and jobs in a country
10.	Self-sufficiency	The ability to provide for oneself without outside help

Answer the following questions in your notebook.

1. What are three similarities between rural and urban life?
2. How does the environment differ in rural and urban areas?

3. Why is education and healthcare better in urban areas?
4. What are the main employment opportunities in rural and urban areas?
5. What are the advantages of rural life?
6. What are the challenges of urban life?
7. How does cost of living compare in rural and urban areas?
8. If you had to choose, would you prefer rural or urban life? Why?

HEALTH PROBLEMS CAUSED BY MOSQUITOES

Mosquitoes are responsible for spreading several deadly diseases, including malaria, dengue, and chikungunya. The symptoms of these diseases are often so similar that they can be difficult to identify without laboratory tests. However, accurate diagnosis is crucial for proper treatment. Let us explore the causes, symptoms, similarities, differences, and preventive measures for these diseases.

Malaria

Causes

Malaria is caused by Plasmodium, a single-celled parasite that is transmitted through the bite of an infected mosquito. The parasite enters the bloodstream through the mosquito's saliva and infects red blood cells, leading to serious health complications.

Symptoms

The symptoms of malaria include high fever, chills, sweating, headaches, nausea, and muscle pain. In severe cases, it can cause anemia, organ failure, and even death.

Prevention

To prevent malaria, it is important to avoid mosquito bites by using mosquito nets, wearing protective clothing, and applying insect repellents. Eliminating mosquito breeding grounds by removing stagnant water and keeping surroundings clean also helps reduce the spread of malaria.

Dengue

Causes

There are four types of dengue viruses, all of which are spread by mosquitoes. An infected mosquito transmits the virus through its saliva when it bites. Dengue can also spread from human to human through infected blood transfusions, organ donations, and from a pregnant mother to her baby.

Once inside the human body, the virus attacks white blood cells, weakening the immune system. The virus replicates inside the white blood cells until they burst and die, releasing the virus into the bloodstream and causing further infection. The destruction of white blood cells leads to leakage of fluids, resulting in low protein levels, fluid buildup in the lungs and stomach, low blood pressure, shock, and, in severe cases, death.

Symptoms

- High fever followed by severe body pain
- Pain behind the eyes and decreased urine output
- Sensitivity to bright light
- Respiratory difficulties
- Intense headache
- Skin rashes appearing as fever subsides
- Internal bleeding in severe cases, leading to nosebleeds, gum bleeding, and low blood pressure

Prevention

- Avoid mosquito bites, especially during early mornings and evenings when dengue mosquitoes are most active.
- Use mosquito nets and wear protective clothing.
- Apply mosquito repellents on exposed skin.
- Prevent mosquitoes from breeding by eliminating stagnant water sources.

Chikungunya

Causes

The chikungunya virus is also transmitted through mosquito bites. Mosquitoes carrying the virus breed near stagnant or polluted water sources. Though chikungunya is not directly contagious from person to person, mosquitoes can spread the virus by biting an infected person and then biting others.

Once inside the human body, the virus infects muscle cells and reproduces inside them until the cells burst. The virus then spreads to other parts of the body, affecting the joints, skin, connective tissues, and nervous system.

Symptoms

- High fever
- Severe joint and muscle pain
- Skin rash similar to dengue
- Headache, nausea, and vomiting
- Fatigue and partial loss of taste

The virus remains in the system for about 5–7 days. Once a person recovers, they develop immunity to the virus for life. While chikungunya is rarely fatal, the joint pain can last for weeks or even months.

Prevention

- Wear protective clothing to prevent mosquito bites.
- Use mosquito repellents and keep windows and doors covered with nets.
- Ensure there is no stagnant water in your surroundings.
- Seek medical help immediately if symptoms appear.

Similarities and Differences in the Symptoms of the Three Diseases

- **Dengue and chikungunya** share almost identical symptoms, such as fever, rash, and body pain. However, joint pain in chikungunya is more severe and lasts longer, while dengue carries a higher risk of internal bleeding and shock.
- **Malaria is distinct** in that it is caused by a parasite rather than a virus. It presents with periodic chills, high fever, and sweating, which occur every two days.

Prevention Measures for Mosquito-Borne Diseases

Since there are no specific vaccines for malaria, dengue, or chikungunya, the best way to prevent these diseases is to avoid mosquito bites. Here are some effective preventive steps:

Wear fully covered clothing.

Use mosquito nets while sleeping.

Maintain hygienic surroundings.

Eliminate standing water to prevent mosquito breeding.

Apply mosquito repellent lotions or sprays.

Take extra precautions during dawn and dusk, when mosquitoes are most active.

Seek immediate medical help if symptoms appear.

All these diseases significantly impact a person's health, causing fatigue and long recovery periods. However, they are preventable and curable. It is essential to take necessary precautions to protect ourselves and our families from these life-threatening diseases.

Vocabulary

1. Study the following words and meaning carefully and use them in your sentences.

S. No.	Words	Meanings
1.	parasite	An organism that lives in or on another organism and benefits at the host's expense
2.	transmitted	Passed from one person or organism to another
3.	circulatory	Related to the circulation of blood in the body
4.	symptoms	Signs or indications of a disease or condition

5.	prevention	The act of stopping something from happening
6.	immune system	The body's defence against infections
7.	virus	A microscopic infectious agent that replicates inside living cells
8.	inflammation	Swelling and pain caused by the body's response to infection
9.	haemorrhage	Severe internal bleeding

Answer the following questions in your notebook.

1. What are the three diseases mentioned in the text that are caused by mosquitoes?
2. Why is it difficult to identify mosquito-borne diseases without laboratory tests?
3. What causes malaria, and how is it transmitted?
4. What are the common symptoms of malaria?
5. How can malaria be prevented?
6. How does dengue affect the immune system?
7. What are the main symptoms of dengue?
8. How is chikungunya different from dengue?
9. Why do joint pains in chikungunya last longer than in dengue?
10. What are some effective ways to prevent mosquito-borne diseases?

SOME FAMOUS PAKISTANI WOMEN

Throughout history, Pakistani women have played an important role in the development and progress of the nation. Their contributions in politics, education, social work, and activism have paved the way for future generations. Let us learn about some of the most influential women in Pakistan's history.

Mohtarma Fatima Jinnah (1893–1969)

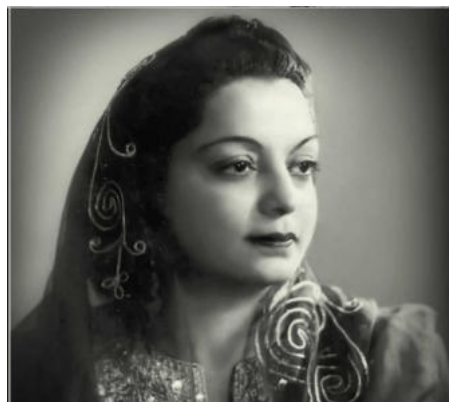

Fatima Jinnah was the younger sister of Quaid-e-Azam Mohammad Ali Jinnah. She played a crucial role in the struggle for the independence of Pakistan. She left her career as a dentist to fully support her brother in his mission. Fatima Jinnah served as a beacon of hope for the women of the subcontinent, allowing them to seek guidance from her brother. Due to her

selfless services to the nation, she was honored with the title Madare-Millat (Mother of the Nation).

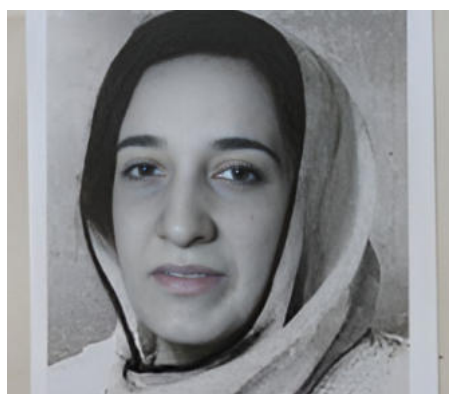

Begum Ra'ana Liaquat Ali Khan (1905–1990)

Begum Ra'ana Liaquat Ali Khan was a political leader, social worker, and women's rights activist. She worked as an honorary secretary for her husband, Liaquat Ali Khan, the first Prime Minister of Pakistan. She played a vital role in mobilizing Muslim women and addressing their concerns. She also established the All Pakistan Women's Association (APWA), which aimed to empower women through education and employment. She was instrumental in forming the Women's National Guards, consisting of 2,400 girls, and held the rank of Brigadier.

Begum Jahan Ara Shahnawaz (1896–1979)

Begum Jahan Ara Shahnawaz was a prominent political figure who represented Muslim women at the Round Table Conferences in London. She was the first woman to deliver a speech at London's Guild Hall, where she explained why the Muslims of India demanded a separate state. Her diplomatic efforts played a key role in gaining international recognition for the Pakistan Movement.

Professor Anita Ghulam Ali (1934–2014)

Anita Ghulam Ali was a renowned educationist, journalist, and government official. She served as the Sindh Minister of Education twice and also held the position of Minister of Culture, Science, and Technology, and Youth & Sports. She played a leading role in improving education in rural areas and was the founding manager of the Sindh Education Foundation. Her contributions were recognized with prestigious awards such as the Pride of Performance and Sitara-e-Imtiaz.

Bilquis Bano Edhi (1947–2022)

Bilquis Bano Edhi was a philanthropist and social worker who had dedicated her life to humanitarian services. She was the wife of Abdul Sattar Edhi and led the Edhi Foundation with her husband. The Edhi Foundation provides nationwide support, including shelter homes, ambulance services, and healthcare for the poor. She has received the Hilal-e-Imtiaz for

her selfless efforts and is often referred to as the Mother of Pakistan for her unwavering commitment to social welfare.

Vocabulary Words

S. No.	Words	Meanings
1.	independence	Freedom from control or influence
2.	mobilizing	Organizing or encouraging people for action
3.	diplomacy	The skill of handling international relations
4.	humanitarian	Concerned with helping people
5.	philanthropy	The act of promoting the welfare of others
6.	empowerment	Giving power or authority to someone
7.	contribution	The act of giving or doing something for a cause
8.	educationist	A person dedicated to teaching and learning
9.	voluntary	Done by free will without force
10.	recognition	Acknowledgment or appreciation of achievements

Answer the following questions in your notebook.

1. Who was Fatima Jinnah, and why is she called Madar-e-Millat?
2. What was the role of Begum Ra'ana Liaquat Ali Khan in empowering women in Pakistan?
3. How did Begum Jahan Ara Shahnawaz contribute to the Pakistan Movement?
4. What were the major contributions of Professor Anita Ghulam Ali in the field of education?
5. Why is Bilquis Edhi known as the Mother of Pakistan?
6. What were the key organizations established by these women, and what was their impact?

7. Why is it important to recognize the contributions of women in history?
8. Which of these women's achievements inspire you the most, and why?

MOEN-JO-DARO

Moen-jo-Daro, which means "Mound of the Dead," is one of the oldest known cities in the world. It is located 27 kilometres from Larkana, on the right bank of the River Indus. Today, only a few people live there, but nearly 4,500 years ago, it was a large and bustling city, home to a highly advanced civilization.

Discovery of Moen-jo-Daro

For centuries, the ruins of Moen-jo-Daro remained hidden beneath mounds of clay and sand. Nobody knew about the city until 1922, when some local villagers found pieces of old smooth pots and bricks at the site.

These ancient remains were taken to Sir John Marshall, an English civil servant and archaeologist, whose job was to study historical buildings and artifacts. When he carefully examined the findings, he immediately realized their significance. He suspected that beneath the mounds of clay and sand, there might be the remains of an ancient city.

Sir John Marshall ordered an excavation, and as his team began digging, they gradually uncovered an entire city—with straight roads, well-built houses, public baths, and an advanced drainage system.

Structure of the City

The city of Moen-jo-Daro was highly organized and well-planned.

- Houses were made of baked bricks and had bathrooms and servant quarters nearby.
- Streets were built in a straight grid pattern, and even the roads were paved with bricks.
- Covered drains ran along the streets, showing that the people had a proper sanitation system.
- Markets and shops were located in the center of the city.
- A large granary (grain storage hall) was found, indicating that agriculture played a vital role in their economy.
- There was a great bath, which might have been used for religious or social purposes.

This shows that Moen-jo-Daro was not just a city but a highly developed civilization with advanced urban planning.

The People and Their Lifestyle

The people of Moen-jo-Daro were prosperous and led a well-organized life.

- **Traders:** The Indus River was close to the city, making trade easy. The people were skilled traders who exported goods to Mesopotamia and other ancient civilizations.
- **Agriculture:** The fertile land around the city allowed farmers to grow wheat, rice, and cotton. They also kept cattle for milk and meat.
- **Craftsmanship:** Skilled craftsmen and artisans worked with gold, silver, and ivory, creating fine jewellery, tools, and decorations. Clay dolls and carts were made for children.
- **Dress and Appearance:** Seals found in the ruins show that people wore long, loose dresses. The ruling class, priests, and elders had distinctive clothing styles.

The People and Their Lifestyle

Many fascinating objects have been discovered at the site, which are now displayed in a museum near the ruins. These include:

- **Seals** with carvings of animals and symbols, possibly used for trade.
- **Jewellery** made of gold and precious stones.
- **Weapons** such as spears and daggers.
- **Pottery** with intricate designs.
- The famous "**Head of a Bull**" seal, indicating the importance of bulls in their culture.
- The **Dancing Girl Statue**, a small bronze figurine of a young girl, showing the artistic talent of the people.
- **Metal tools**, proving that they had knowledge of metallurgy.

Archaeologists believe that the city was around 4,500 years old based on these metal objects and pottery.

The Mysterious Decline of Moen-jo-Daro

Although Moen-jo-Daro was a thriving civilization, it eventually disappeared. Historians and archaeologists are still uncertain about the reasons for its decline. Some possible theories include:

- **Invasion from the North:** Some believe that foreign invaders attacked the city, leading to its downfall.
- **Natural Disasters:** Others suggest that a great earthquake or flood destroyed the city, forcing the people to leave.
- **Environmental Changes:** Some experts think that climate changes, such as drought or shifting river courses, made it difficult to survive.

One of the greatest mysteries of Moen-jo-Daro is its script. The symbols found on seals and pottery remain undeciphered. If language experts can decode them, we may learn much more about this lost civilization.

Vocabulary Words

S. No.	Words	Meanings
1.	excavation	The process of digging to uncover historical sites
2.	archaeologist	A person who studies ancient civilizations
3.	civilization	A well-developed society with culture, trade, and governance
4.	artifacts	Objects made by humans in ancient times
5.	granary	A storage place for grains
6.	metallurgy	The study and crafting of metals
7.	invasion	An attack by an enemy or outsider
8.	seals	Small carved pieces used for stamping or marking trade goods
9.	prosperity	Wealth and success
10.	script	A system of writing or symbols

Answer the following questions in your notebook.

1. Where is Moen-jo-Daro located, and what does its name mean?
2. Who discovered the city, and how did they find it?
3. Describe the planning and structure of Moen-jo-Daro.
4. What do we know about the people of Moen-jo-Daro based on the discoveries?
5. Name some artifacts found in Moen-jo-Daro and their significance.
6. What are some possible reasons for the decline of Moen-jo-Daro?
7. Why is the script of Moen-jo-Daro still a mystery?
8. What can we learn from Moen-jo-Daro about ancient civilizations?

THE GUDDU BARRAGE

Rivers have always played a vital role in human civilization. Since ancient times, they have served as trade routes, allowing people to transport goods via boats and ships. Before the development of roads and railways, rivers were the primary means of transportation, which is why most ancient towns were built near rivers.

Apart from trade, rivers have also been crucial for agriculture. In the past, people relied entirely on rainwater for irrigation, which was often unpredictable and insufficient. Later, humans developed techniques to store rainwater and use it during dry seasons. However, a more effective method was the construction of canals to transport river water to the fields. This system worked well, but it had a major flaw—in winter, when river levels dropped, canals would dry up, leaving farmers without water.

This led to two major challenges:

1. Ensuring a steady supply of water throughout the year
2. Preventing destructive floods

To address these challenges, barrages were introduced.

What is a Barrage?

A barrage is a wall-like structure built across a river to control the flow of water. It has gates that allow water to pass through in controlled amounts. The main functions of a barrage are:

Managing floodwaters by controlling excess river flow

Storing water to ensure year-round irrigation

Providing water to canals that distribute it to agricultural fields

Protecting life and property by reducing the impact of floods

Because of these benefits, barrages are now used worldwide for effective water management.

The Guddu Barrage

The Guddu Barrage is one of the largest barrages in Pakistan. It was constructed on the Indus River, which runs through almost the entire country.

Construction and Structure

- The barrage is built at a location where the Indus River is 14 kilometres wide.
- It narrows the river's flow to 1 kilometre at the barrage.
- The total length of the Guddu Barrage is 1,355 metres.
- It can handle a flood of 1.2 million cusecs (cubic feet per second).
- A 7-metre-wide road bridge runs across the barrage, significantly reducing travel distance between Lahore and Quetta.

Irrigation and Canals

The Guddu Barrage supplies water to a vast agricultural region. It has three main canals:

1. Begari Sindh Feeder (Right Bank)

2. Desert Pat Feeder (Right Bank)

3. Ghotki Feeder (Left Bank)

These canals are among the largest in the world and help irrigate 2.7 million acres of land.

Agricultural Impact

Most of the irrigated area falls within:

Sukkur and Jacobabad districts in Sindh.

Kalat division in Baluchistan.

Due to the Guddu Barrage, grain production in this region is expected to increase by half a million tons. The availability of a steady water supply has improved crop yields, helping farmers grow wheat, rice, and other essential crops.

Challenges in Building the Guddu Barrage

The Guddu Barrage was not only one of the biggest barrages in Pakistan, but also one of the most difficult to complete.

- More than 5,000 engineers, technicians, and labourers worked day and night to finish the project.
- The barrage was successfully completed and put into operation on 4th February 1962.
- Extreme weather conditions and engineering difficulties made construction highly challenging.

Despite these obstacles, the successful completion of the Guddu Barrage has transformed irrigation and agriculture in the region, making it one of the most important water management projects in Pakistan.

Vocabulary Words

S. No.	Words	Meanings
1.	Barrage	A structure built across a river to control water flow
2.	Irrigation	Supplying water to crops for farming
3.	Cusecs	A unit measuring water flow (cubic feet per second)
4.	Canals	Man-made waterways for irrigation
5.	Floodwater	Excess water caused by heavy rainfall or river overflow
6.	Agriculture	Farming and cultivation of crops
7.	Engineers	People who design and build structures like bridges and barrages
8.	Technicians	Skilled workers who help with construction
9.	Constructed	Built or assembled
10.	Productivity	The ability to produce goods, especially in farming

Answer the following questions in your notebook.

1. What is the importance of rivers in human civilization?
2. Why was there a need to build barrages?
3. What is a barrage, and how does it work?
4. Where is the Guddu Barrage located, and on which river is it built?
5. What are the three main canals of the Guddu Barrage?
6. How does the Guddu Barrage help in agriculture?
7. What challenges were faced during the construction of the Guddu Barrage?
8. When was the Guddu Barrage completed, and how many people worked on it?
9. Write the main idea or summary of **“The Guddu Barrage”** in your own words.
